

I completely agree with the World Health Organisation's definition of health, which emphasises the holistic nature of well-being. It highlights the importance of not only treating illness but also promoting wellness and preventing disease. To achieve this, healthcare systems would need to undergo a major revamp. At the onset, it would require a shift in focus from reactive to proactive healthcare.

This would entail a more comprehensive approach that includes preventative measures, health education, and promoting healthy lifestyles. The healthcare system would also need to move towards a patient-centred approach with a focus on their unique needs and preferences. Most importantly, a shift towards accessible and affordable healthcare would only become possible with digitisation and multi-sector cooperation.

Dr. Grant, what's your vision for Ruby Hall Clinic for the next decade or so?

Today, Ruby Hall Clinic is recognised as one of the most advanced and sizeable medical facilities in the

country. As the largest cardiac centre in Western India, we perform 30 coronary angiographies and 8 to 9 angioplasties daily, in addition to 3 to 4 open-heart surgeries. Our Intensive Care Unit, boasting more than 200 beds, is also the largest in the nation.

Currently, we aim to further enhance our cancer centre to make it the largest private cancer centre in the country. With two linear accelerators already in operation and the recent acquisition of the Cyberknife, we are now in the process of acquiring the MRIdian, a MR-guided Linear Accelerator — a first of its kind in the country. For the next two years, cancer treatment will be our main focus area. Furthermore, we plan to expand our transplant centre, with the goal of making Ruby Hall the largest transplant centre in Maharashtra and Western India.

With a workforce of 4500 employees, we run 20 diagnostic centres throughout small towns in Maharashtra and Karnataka and are expanding to operate four hospitals in Pune. Construction of our fourth hospital at Amanora city has already begun, and it will be operational within 2 and a half years. The future is indeed exciting and we are riding the wave!

Mr. Behram Khodaiji, tell us about your long and illustrious career in the medical sector?

My foray into the medical administration field commenced two decades ago when I became a member of the Governing Board at Prince Aly Khan Hospital in South Mumbai. My role on the board entailed making critical decisions about the hospital's operations, whilst heading the marketing committee. Subsequently, I became the Director of Administration, where I was responsible for various departments. I also collaborated with a renowned cardiac surgeon to launch a Cardiac Rehab Center in Mumbai.

Following this stint, I became the Assistant Vice-President at Sir HN Reliance Foundation Hospital, where I headed medical administration and Health Outreach programmes. Eventually, as the Joint CEO of Masina Hospital, the oldest trust hospital in Mumbai, I was responsible for planning and executing the hospital's management to achieve standards of efficiency and create a modern, conducive healthcare workplace. The opportunity at Ruby Hall Clinic came calling, where I lead the largest tertiary care multispecialty medical group in Pune.

Mr. Khodaiji, what are the primary specialities in the healthcare services provided by Ruby Hall Clinic?

With over 40 specialities and sub-specialities, there is virtually no part of the human anatomy and mind that our doctors don't care for. Our family of over 4000 doctors, nurses and support staff are adept at

MR. BEHRAM KHODAIJI,

CEO, Ruby Hall Clinic

caring for all those who enter our doors, regardless of whether they require consultations, OPD care or surgical expertise. From cancer care to robotic surgery, IVF to organ transplantation, neuroscience to cardiac care, emergency services to women's health and even paediatric care — we offer it all. We strengthen our approach to disease-based service lines with a focus on complex clinical care programmes led by multidisciplinary teams.

How have technological advances in the field of medicine changed things for you Mr. Khodaiji?

As a hospital, we know that technology has become an indispensable part of our lives. We have always been at the forefront of medical advances, for example, we are the first hospital in Pune to have acquired the Da Vinci Robotic Surgery equipment. At present, we are not only ahead of our competitors in the Indian market, but are also at par with our international counterparts. We are home to Asia's first and most advanced Senographe Pristina mammography system, a 3 Tesla MRI, the Einstein Vision 2.0., a digital PET and SPECT CT scanner which further fortify patient care. Very soon, we are going to add the Cyber Knife and MRI-Linac to our repertoire. We're also amongst the ten hospitals in the country to procure four linear accelerators — including Varian's Halcyon and the TrueBeam STx in the fight against cancer. We have stayed at the top of our game by providing electronic medical records (EMR) for our patients. Another trend which is working wonders is artificial intelligence and the internet of things (IoT). When clubbed with information processing and decision-making it can open up many possibilities.
