

Bose worked hard in those early years to get into the best medical college in Kolkata. Secured a post-graduation in surgery and post-doctoral degree in Cardiac Surgery. Then dived into a phase where he could develop his craft as a surgeon by assisting, observing, volunteering at every opportunity he got. There was this intense urge to push himself harder with every passing day, almost tirelessly. His surgical journey took him to various hospitals in India – The famous Breach Candy Hospital & Bombay Hospital in Mumbai, B. M. Birla Heart Centre and subsequently Apollo Hospital in Kolkata, where he was given the role of the Chief Cardiac Surgeon. This rise was meteoric. And somewhere Bose, now the renowned Dr. Satyajit Bose, realised something was amiss. Something made him restless.

He realised he was doing surgeries for the rich and privileged. The ones who wouldn't flinch at spending huge amounts of money to get the best doctors at their disposal. Then he remembered how the little boy had felt at the clinic. How there's a large section of the society, people below the poverty line, the middle class living in the non-metropolitan areas, who still can't afford to access doctors and treatment that they need. He tapped back into the memory of how he chose to become a doctor. The philosophy that drove him. He decided to do something about it.

He started doing free heart camps in various parts of Eastern India, the first baby step towards what would finally become his true calling. He started opening up his access to people who never had any access to specialist Doctors like him. Unfortunately, he was getting limited to just diagnosing problems and couldn't do surgery for the people he met because the corporate hospital packages were way beyond their means. This, once again, kept him restless and edgy. He had to find a way to cure these people. Solve their problems.

Then he took a step, which in hindsight, still gives him goosebumps. He quit his secure job at Apollo and decided to set up the first super specialty tertiary care hospital outside the city limits of Kolkata, a first in the Eastern part of India. He found a group of people in Durgapur, who shared the same passion and interest towards this and forged a partnership that became the foundation of The Mission Hospital, Durgapur.

Today, The Mission Hospital, Durgapur is now a 550 bed, NABH accredited hospital, running DNB & DrDNB courses across 10 disciplines, catering to people across Eastern India, SAARC countries like Ghana, Nigeria, Afghanistan, etc. It's ranked as the 5th best hospital in India. The business strategy and SOPs are of such order that it has found its place in Harvard Business Review and is taught as a Case Study in various business schools across USA.

People across all economic backgrounds of the society are taken care of at this hospital. At Mission there's zero discrimination and every ailment is treated equally. Something that would put a smile on that little boy's face, the boy who couldn't access the treatment that his grandmother needed. The Mission Hospital Durgapur is governed by the simple philosophy of being able to look after the people who need the treatment and have the access to a system of cross subsidisation to cut out the expensive nature of treatment in India.

But this was just the tip of the iceberg for Dr. Satyajit Bose. Soon, he realised that there was a lacuna in the treatment of eye problems. A lot of patients were travelling to the southern part of India for complex problems of the eye. Most centres in Eastern India were local ophthalmologist led small set ups with primary focus on a basic service like Cataract. Treatment for Retina, Glaucoma, Corneal Transplant etc, were either inaccessible

or expensive. Now, the Cardiac Surgeon pushed beyond his domain of expertise and started acquiring the best talents from Sankara Nethralaya, Narayana Nethralaya, AIIMS (New Delhi) and set up a real Super-specialty Eye Hospital, which is a final destination for all complex Eye problems. He christened it as Dvita Eye Hospital, and opened access to people all across the Eastern part of India. In just about a year, Dvita has become equipped to offer treatments that can give the best of eye centres in the country a run for its money. It already has cured 60000 patients, done more than 5000 surgeries and run more than a 100 free camps.

The mission to bring the best of healthcare to the doorstep of everyone who needs it is the engine that runs the initiatives that Dr. Bose embarks on. Based on the same philosophy, he has set up The Mission Neighbourhood Clinic in Asansol, a fully equipped Diagnostic Centre. And at the beginning of this year The Mission Hospital Group initiated the construction of a state of the art Cancer and Organ transplantation unit spread across a 10 acre plot in the Bengal Aerotropolis area in Kazi Nazrul Airport, Durgapur - A one-of-a-kind oncology care centre modelled on international standards for the people of the entire country.

Dr. Bose has dedicated his life towards a service and he continues to build on it. Even if it makes him push beyond the realms of his own expertise as a Cardiac Surgeon. For a country that lacks access to the basic healthcare needs, especially for the larger population residing beyond cities and the metropolis, Dr. Bose is literally like a messiah - A man who is fuelled by his vision to reach out to the larger community, diagnose their ailments, give proper medical and surgical care and alleviate suffering from their lives. Just what the doctor ordered for a country like India.
