

we have now expanded our horizon to incorporate education on evolving technologies, empowering users to maximize their potential. Our ultimate goal is to onboard 50 million individuals into the world of Web3.

Can you talk about some of the initiatives that CoinDCX is undertaking to promote education and awareness about Web3?

Our goal is to build a strong legacy backed by ecosystem building and education that will create a profound impact. To achieve this, we have launched a series of initiatives, such as Namaste Web3, a series of roadshows organized across India. I am confident it will take Web3 education to a different level altogether. Last year we launched Unfold, an annual Web3 event that brings the entire ecosystem under one roof! We organize community chapters in several cities regularly, where we bring together developers, enthusiasts, and experts to share knowledge and insights on blockchain, crypto and Web3. We also organize hackathons and Demo Days to encourage innovation and collaboration among community members.

We believe education is key to building a strong and vibrant community in the Web3 space.

How many people have you touched upon over the last five years?

Over the past five years, our team has embarked on an incredible journey of growth and impact. They poured their hearts and souls, and now we began to see the ripple effect of the efforts. When we meet people from all walks of life at various forums and events,

from tech enthusiasts to curious students to seasoned investors, time and again, we hear the same thing: our work has inspired them to explore the world of crypto and blockchain. It's hard to describe the feeling of pride and fulfillment we felt each time we heard those words.

But we don't want to stop here. We wanted to create a lasting legacy that would continue to inspire and educate people for years to come.

There are still challenges in making crypto accessible to the average person. What steps can be taken to address this issue?

We understand that accessibility is a key challenge in the crypto industry, and we are constantly working to improve the technology so that it's easy for the average person to securely hold and manage their digital assets. Our new product, Okto, is a significant milestone in this direction, as it bridges the gap between users and DeFi opportunities.

How do you see your role in working with stakeholders to establish a unified regulatory framework for Web3?

India has over 450 active startups in the web3 space, a talent base of 75,000 people, multiple unicorns, and the potential to create over 100 more. With 11% of the global web3 talent, the community is huge, beaming with potential, and extremely passionate about making a mark. We've all come together with a nation-building vision to help the community grow. This is why we, along with many other Web3 companies, supported the launch of Bharat Web3 Association, a community-driven

initiative focused on promoting awareness, education, and collaboration in the Web3 space in India.

We see our role as working with stakeholders to ensure that the regulatory framework strikes a balance between consumer protection, innovation, and the promotion of the overall digital economy. It is crucial that the regulatory framework for Web3 is flexible and principle-based, given the dynamic and rapidly evolving nature of the ecosystem. We are committed to playing our part in making India a web3 hub by collaborating with all stakeholders to establish a unified regulatory framework. With the potential of web 3 to contribute an additional \$1.1 trillion of economic growth to India's GDP, we must take every shot to make this vision a reality.

What are your expectations for the upcoming G20 discussions on this topic?

With regard to the upcoming G20 discussions on Web3 regulation, we hope that the member countries can come to a consensus on the need for a unified and coordinated approach to regulation. We believe that the G20 can play a vital role in establishing a common taxonomy, regulatory principles, and minimum standards for Web3. Such an approach will not only protect consumers and investors but also foster innovation and global cooperation.

In fact, we are optimistic that the G20 will prioritize capacity building and ongoing collaboration to ensure that any regulatory framework is effective and responsive to the rapidly evolving nature of the Web3 ecosystem. We firmly believe that the crypto industry has a vital role to play in shaping the digital economy of the future, and we are committed to working with stakeholders to achieve this goal.

Finally, what advice do you have for the Web3 community?

As active participants in the Web3 space, we understand the importance of staying up-to-date on the latest developments in the technology and use cases. To ensure more people are informed and engaged, it is crucial to prioritize education and knowledge-sharing.

This emerging space has the potential to redistribute power and value. Together, we can make a real difference in the world of Web3.

Namaste Web3 is an education and awareness drive initiated by CoinDCX and Forbes India. It aims to reach every corner of India, and hopes to ignite a spark of revolution by engaging with enthusiasts and entrepreneurs across the nation.
