vide the much-needed impetus for growth in the network. PhonePe is taking a nuanced approach. With a dedicated buyer app, the Walmart-owned company will have a special focus on hyperlocal, starting with groceries in Bengaluru and gradually adding additional categories, including electronics. As per people in the know, the company aims to hit five-digit order volume in two months from launch, which is expected to happen anytime now. PhonePe declined to participate in this story.

PhonePe claims to have 440 million registered users, which means one in four Indians are now on the app. It has also digitised approximately 35 million offline merchants. "There is a massive incentive for them [PhonePe], because the cost to do business is not there and they already have the customer," says Srinivasan, whose VC firm is one of the investors in PhonePe's ongoing \$1-billion fundraising. "They have already solved on the credit side. Now they have to change behaviour."

While PhonePe focusses on urban hyperlocal, seller and buyer apps like eSamudaay and Spice Money, respectively, are taking ONDC to the masses. eSamudaay offers easy-to-use tools for local entrepreneurs through its District Digital Economy programme, which enables

merchants to do local-to-local, global-to-local and local-to-global e-commerce transactions. "True democratisation of digital commerce is achieved when the smallest seller is able to participate in the larger scheme of things without losing autonomy," says Anup Pai, Co-founder and CEO of eSamudaay. "For that, we need to get the smallest of producers activated on the digital network and be able to compete on the strength of his or her product."

Spice Money is testing out bulk buying opportunities for its 1.2 million rural entrepreneur-borrowers who can purchase supplies from anywhere through ONDC. It also plans to launch a seller app on the network to give wider buyer access to small manufacturers that are currently limited by their distribution capabilities. "These are huge problem statements in rural India," says Sanjeev Kumar, Co-founder, Executive Director & CEO of Spice Money. "ONDC is a large opportunity for us because it is a commerce opportunity with embedded finance."

Snapdeal, which recently launched on ONDC as a seller app, says it is receiving orders from smaller towns such as Ajmer, Gurdaspur, Aligarh, Indore, Kakinada, and Amravati. "Enabling India's existing retail participants and sellers, especially MSMEs, to embrace the
