

Yotta D1 in Greater Noida. Additionally, the firm is building a network of data centre parks in places like Mumbai, Pune, Chennai, Kolkata and Gujarat. “With a presence in real estate, construction and power, and experience in building large-scale infrastructure projects, infrastructure players are best poised to tackle the industry’s challenges and build a network of data centres,” says Gupta.

To get a sense of the scale, Yotta D1—the first of six data centre buildings that will come up at its Data Center Park in Greater Noida—has been set up with an investment of around ₹1,500 crore. Spread across 300,000 sq. ft, it offers an IT load capacity of 28.8 MW and can house 5,000 server racks across seven server floors; it also provides 48-hour power backup on full load. The remaining five buildings will be set up with an investment of another ₹9,000 crore over five to seven years.

Similarly, in February 2021, Adani Enterprises entered into a joint venture with EdgeConneX, a leading global data centre operator with 50 facilities in 30 markets. The JV plans to set up 1 GW of data centre capacity by 2031. Walmart-owned Flipkart, which already has two data centres in Hyderabad and Chennai, zeroed in on AdaniConneX for its third data centre at the Chennai facility. It also makes sense for start-ups to go for the colo model. Explains Gupta: “By utilising services from a data centre and cloud service provider, start-ups can access enterprise-grade infrastructure and support without the need for significant upfront investments. This allows them to focus their resources on their core

“Today, practically all public and private enterprises depend upon reliable, always-on data centre operations, whether owned or outsourced”

‘DATA CENTRE CAPACITY TO RISE SIXFOLD IN 6 YEARS’

Sunil Gupta, Co-founder & CEO of Yotta Data Services, throws light on the increasing need to process and store data and the road ahead

BY NIDHI SINGAL

INDIA IS IN the midst of a data centre boom. But why are data centres important? Sunil Gupta, also known as the data centre man of India, provides the answers in an interaction with *Business Today*. Edited excerpts:

►►►

Why are infra players like L&T, the Adani Group and the Hiranandani Group (of which Yotta is a part) entering the data centre business?

With the government’s focus on promoting digitalisation and the growth of the digital economy, the industry is at a critical inflection point. This has attracted significant interest from infrastructure players who see this as an opportunity to diversify their business.

With a presence in real

estate, construction and power—critical components for the development and operation of data centres—and significant experience in building large-scale infrastructure projects, infrastructure players are best poised to tackle the industry’s challenges and build a network of data centres.

What is the standard cost for a customer/individual to access different setups like full data centre service or co-location?

The cost of accessing a full data centre service or co-location can vary significantly based on specific needs and requirements. Enterprises may require a wide range of ancillary services, such as dedicated internet, network, managed services, and
