

POINTING SKYWARDS

► A liberalised framework together with the PLI scheme has played a significant role in supporting local innovation through the Make in India programme

► Drone start-ups have raised \$25.67 million of equity funding in FY22 compared to \$11.2 million in FY21, according to data from Tracxn; and in FY23, the industry had raised \$49.7 million till March 27

► The country, however, needs to expeditiously resolve supply-side challenges on key components like batteries, motors, propellers and airframes

► Besides, given the current slow adoption of drone solutions and services, it might make sense to promote the drone-as-a-service concept to encourage its utilisation and demand
