REVIEW

STYLE & SUBSTANCE

Samsung's latest convertible is a very capable system, and a looker to boot

► **SAMSUNG WAS** missing from the notebook space in India for nearly a decade. But the Korean tech giant, known for its Galaxy smartphones, monitors and TVs, came back last year—and it wants a chunk of the pie. And the Galaxy Book3 Pro 360 is one of the weapons in its arsenal.

Boasting a premium aluminium body with a solid build, it has a 16-inch touch display, a full-sized keyboard, and a hinge that turns 360 degrees. It also comes with a stylus (S-Pen) that's great for sketching, making notes and more.

The notebook is easy on the eyes with its AMOLED screen. I loved the keyboard and didn't miss a beat while switching from the MacBook Pro; on other laptops it results in typos. The touchpad, while responsive, is more towards the left, so I ended up right-clicking the touchpad more often than not. Connectivity is also fast.

Under the hood is the 13th Gen Intel i7 processor (with no dedicated graphics cards, the laptop relies on the Intel Iris Xe chip) with 16GB RAM running Windows 11 Home

that delivers solid performance for everyday computing. From gaming to streaming and browsing to video editing—the laptop easily handles it all. The convertible's X-factor is the S-Pen's functionality and 'Galaxy Book Experience'. The bundled S-Pen magnetically attaches to the lid of the laptop, but be cautious if you're carrying it around. The flat, rubberised finish of the S-Pen provides a comfortable grip, while I liked the slight friction when writing on the screen, as it properly replicates pen on paper.

Do note that the screen wobbles a bit when scribbling on it in laptop mode; switching to tablet mode to scribble or sketch using the S-Pen is a better option. Samsung is also building on what Apple has mastered—seamless sharing between devices in its ecosystem. There are some pre-installed Samsung apps, but the dedicated 'Galaxy Book Experience' window brings all of this under one hood and is accessible with a tap on the taskbar. This includes Quick Share for wirelessly sharing photos, docs and more;

syncing Samsung notes across devices; Quick Search for searching files, folders, documents and more on the laptop; Smart Things, Samsung Pass and more—all of it accessible by logging into your Samsung account.

Topping all of this up is the 76Wh battery that lasts for around 12 hours on a single charge. And unlike the traditional bulky brick-chargers, this one comes with a slightly bigger adapter and a Type C cable. With the Galaxy Book3 Pro 360, Samsung has built on its strengths—stunning hardware in a lightweight body, a striking display, performance to handle workloads, and the S-Pen functionality.
