

revolutionise healthcare in the future,” says Vikram Thaploo, CEO of Apollo TeleHealth.

Incidentally, eSanjeevani is a part of the Ayushman Bharat Digital Mission (ABDM), the government’s digital health initiative. The established under ABDM supports seamless exchange of data across primary, secondary, and tertiary facilities to ensure continuum of care. “For India, simple advances like tele-medicine and electronic medical records will help since this will save travel and expenses for the expanding middle class,” says Dr Anoop Misra, Chairman of Fortis C-DOC hospital in New Delhi.

WITH THE FOCUS on preventive health, there has been an emergence of disruptive models from healthtech start-ups with the adoption of technology. According to a report by advisory firm RBSA Advisors, the Internet of Things (IoT), in conjunction with tele-medicine, has created a new Internet of Medical Things (IoMT), which will come to play a critical role in monitoring and preventing illnesses. AI-driven analytics, tools and machines can help healthcare providers find the right approach for each patient with

more efficient, precise and impactful interventions.

Emerging technologies are helping to develop novel, better treatments while lowering costs. Over the next few years, artificial intelligence (AI), data and IoMT will have swiftly expanded from simple devices designed to track vital signs such as heart rate and blood oxygen levels to smartwatches that are capable of even complex scans such as ECGs and smart textiles that can track blood pressure and also predict the risk of heart attacks.

“Apart from physical illness, a growing importance is being placed on developing digital wearable devices that are capable of detecting signs of mental ailments with the use of physical indicators such as sleep patterns, activity levels, and heart rate to detect when a person may be at risk of depression. Wearable medical devices are incorporating some of these functionalities in the coming years,” says Gaurav Bagga, Head of Product & Engineering at Pristyn Care, a Gurugram-based healthcare company.

“Wearables can improve personal wellness because lifestyle disorders like high blood pressure and diabetes are frequently brought on by inactivity or poor dietary choices. However, in order to harness the power of wearables in making healthcare cost-effective and person-
