and geopolitical crises”.

And as China’s star has dimmed in the recent past, Indian industry is reaching out for the stars.

Industrialist Sajjan Jindal, Chairman and MD of JSW Group, revealed he is working on a made-in-India electric vehicle, just like a Tesla. “I am very passionate about cars, and that has been my childhood passion. I think now is the time to build a very high-quality car in India which could be similar to a Tesla. That is what I am really work-

ing on,” he said.

Underlining the global ambitions of Indian industry, Jindal added the idea is to make a car from India that will not only be for the domestic market, but for the global market as well. “We would want the car to be made in the country for Indians, but also such a technology that should sell in Europe and Japan as well,” he said. “I want to make a car that is made in India, sold in India, and also sold in international markets. Instead of us importing [vehicles],

other countries should import from us,” Jindal said.

State Bank of India, India’s largest bank, feels an economic slowdown or recession is clearly on the horizon, but it could be restricted only to the first half of 2023, following which robust growth could be expected. Chairman Dinesh Kumar Khara said that his assessment after meeting a lot of CEOs around the globe is that recession may hit certain parts of the world, particularly in the first half of 2023. “But I
