

» The government needs to introduce schemes like production-linked incentives (PLI) for sectors where employment generation is more

» Logistics cost is 13 per cent in India and 7 per cent in China; if India can bring it down to 10 per cent, that will add 2 per cent to the GDP

» Real estate volumes have grown 15-20 per cent depending on the type of sector you are looking at

» India is unable to compete with Bangladesh in low-cost goods due to high wage costs

» Investments in infra have led to lower costs in logistics

» India represents 3.5 per cent of the world's market cap and people should think about global investing and look at all the geographies

» When you talk of long-term planning, you have to look at global investing. That means, at least 30 per cent of one's assets should be global over time

» Get asset allocation right rather than being on the hunt for the next multi-bagger

» Single geography, single stock, single fixed income asset, all these are risky strategies

» Building a concentrated portfolio and staying the course is the best way to compound your wealth

THE FISCAL OVERHANG: EYE ON BUDGET 2023-24

» While the government's performance-linked incentive scheme can serve as a great experiment, it can neither make India a manufacturing hub nor can it drive up India's GDP on its own. The scheme only accounts for 1 per cent of India's GDP currently. Even fast growth in that 1 per cent cannot move the overall GDP needle

» PLI can be seen as an experiment to improve India's image as a business-friendly destination to bring investments into the non-PLI sectors

» There is evidence of pick-up in private investment activity. But geopolitical conflicts may hamper further improvement. Once the fog lifts, private investments will take off in a meaningful manner

» The Indian economy is in a sweet spot going by net NPA, credit growth and UPI transactions, and the country has to take advantage of it

» The economists foresee India's growth in the next year to be in the range of 5.5-6 per cent-plus
