

For 2030 and beyond, TDTL offers a compelling vision. By providing technology solutions and learning routes with a business centered perspective, it is gearing up to enable and support digital transformation for all people and businesses globally. In the upcoming years, it plans to pace digital transformation and deliver excellent, cost-effective IT solutions across a range of industry verticals.

The basic requirement is skilled manpower that is adept for these roles. TDTL has rolled up its sleeve to develop a workforce that has the knowledge, skills, and aptitudes necessary to meet the goals and needs of organizations even in 2030. The workforce of the future will be shaped by a number of intricate, dynamic, and conflicting influences, some of which may be predictable while others may be difficult to gauge. The move to an automated workplace will be influenced by shifting laws and regulations as well as general trends in consumer, citizen, and worker sentiment. The result of this conflict will impact how work will be done in 2030.

TDTL aims to explain and comprehend, implement organizational transformation for future workforce effectively. In order to administer and monitor employees' learning programs, it offers enterprise learning systems to businesses all over the world. These programs will enable businesses to adopt and train their workforce for the challenges of 2030.

"We have so far worked in healthcare, banking, education and manufacturing sectors. A common problem statement across industries is about people management and customer experience. Almost all companies want to address these issues. The fundamental need of any customer is that it should be easy for him to operate to deliver customer experience or employee experience," Andre elaborates.

To enable this, TDTL offers enterprise learning services to companies from the software industry. They out-source boot camps to TDTL allowing the experts to explain the intricacies of the emerging technology. These boot camps are usually of 3 to 6 months duration for lateral and fresher candidates who have been hired by the company. As Andre shares, "Even after completing their degree education, fresh candidates are not employable from day one. Today everyone can learn the basics of any technology-free through online or social media platforms, but the knowledge of domain-specific applications of that technology is not available there. We have created that exposure of adaptability and provide an exclusive platform and experts to candidates from companies."

Andre has created two entities to manage his global footprint. The US based DataTech Labs and Dnyanasha Technology Solutions India Private Limited in India. Growth has been spectacular. Projects started coming in. The TDTL team strength rose from 25 in March 2021 to 48 in August 2021. Andre says, "In just 18 months we are now about 110-member strong team. We are still short of people and planning to recruit 100 more in the next few days for multiple projects. We have started operations in Dubai also where we have an 11-member team".

Andre is recoding the way uses technology. He is empowering the next generation to shape the future. The globe is this artist's canvas. We look forward to a better world.
