

Digital, the New Driver

► **K.V. KAMATH**
CHAIRMAN, NATIONAL
BANK FOR FINANCING
INFRASTRUCTURE AND
DEVELOPMENT (NABFID)

THE BUILDING BLOCKS of achieving sustained high growth are very clear. There has to be a mindset to drive infrastructure at a pace and, at the same time, get your equation in terms of water and agriculture right. You should have an industrial sector that should be able to build on its own in terms of positive cash flows and margins. You need a financial system that can support all these things. That, too, happens when you have clean balance sheets. In our case, banks' balance sheets are clean and corporate India is also de-leveraged. The capital market, especially the equity market, has come of age. There is also a new driver—the digital revolution. In a digital world, everything becomes more efficient, more competitive and more productive. All these together—the unfinished agenda in infrastructure, unfinished agenda on water, growth agenda on industry and manufacturing, and completely new opportunities from digital—will propel us down this runaway.

A Global Growth Engine

► **KEKI MISTRY**
VICE CHAIRMAN & CEO,
HDFC LTD

INDIA WILL REALISE its true potential in the next 25 years. It stands apart from its emerging market peers as it is not a one-trick pony. Further, a stable government committed to sustainable policy measures to facilitate strong growth, create jobs and improve living standards augurs well for the economy. India is a consumption-based economy with strong macroeconomic fundamentals. Its growth drivers are self-sustaining owing to favourable demographics, demand, rising aspirations, growing middle class, rapid urbanisation and entrepreneurship. There is huge under-penetration in financial services, which implies a tremendous potential for growth. Continued focus on financial sector reforms, technological initiatives, employment creation and infrastructure development will make India one of the engines of global growth.
