

A Fount for Hundreds of Unicorns

► **RITESH AGARWAL**
FOUNDER & GROUP
CEO, OYO

WE WILL LOOK BACK at the current period as one when the foundations for a New India were laid down. A time when India's long-promised potential is materialising through a combination of progressive and enabling government programmes, and development of physical and virtual infrastructure that organisations— young and established—are harnessing to the hilt. India's welfare schemes are also getting more efficient, targeted and effective. The country's start-ups are solving problems through tech and by creating jobs—leading to spending increasing—and by bringing commerce to the smaller towns of India. Today, the small town is the new big town for entrepreneurship. By 2047, I see India as having eliminated that distinction: every corner [of the country] will be a fount for hundreds of unicorns. India's golden decade of growth would have established us among the top three economies, and hopefully among the top two nations when measured on soft power. I do clearly envision the coming 25 years to be truly the commonly envisaged 'Amrit Kaal'.

FINTECH TO DRIVE MSME GROWTH

► **NIRMAL JAIN**
FOUNDER & CHAIRMAN,
IIFL GROUP

INDIA IS THE FASTEST-GROWING fintech market in the world with 87 per cent adoption of fintech compared to the global average of 64 per cent. As per data available, in 2020, India processed 25 billion real-time transactions compared to 15 billion in China and only 1.2 billion in the US. The government's successful push of JAM (Jan Dhan Yojana, Aadhaar and mobile number) accelerated financial inclusion of the masses. UPI has already revolutionised payments. The next stage of innovation is set with OCEN (Open Credit Enablement Network) and AA (Account Aggregator), which are the engines for propelling digital delivery of credit to hitherto credit-deprived MSMEs. To create millions of jobs and bring exponential economic growth, credit and banking services to the unbanked and under-banked small entrepreneurs will happen through the innovative neo-banking platforms.

Banking Will be Transformed

► **AMITABH CHAUDHRY**
MD & CEO, AXIS BANK

BANKING IS GOING through a transformative phase in which contextualisation, personalisation and democratisation will be the key drivers. Contextualisation means that banking services will increasingly be embedded in the contextual journeys of customers. For example, rather than going to a bank for mortgage, customers will get instant funding while selecting their dream home on a real estate search site! Personalisation means that power will shift from vanilla product manufacturers to platforms that create exceptional experiences, and customers will be in control of what they want to consume, when and how. For instance, a credit card was a vanilla product, and now BNPL options are providing on-demand credit, while multiple fintechs are offering cards configurable by individual customers to suit their individual needs. Democratisation of data and credit through India Stack and OCEN will allow every Indian with basic identity to have access to credit. For example, a small company offering tax uploading facilities could offer on-demand credit using OCEN.
