

India to be Among the World's Top Three Economies

► **PUNEET CHHATWAL**
MD & CEO, IHCL

WITH A RICH HISTORY going back centuries, India has always charted its own path. Owing to its immense potential, expansive resources and strong talent pool, the country is today on the path of transformation as a leading global player across the fields of business, infrastructure development, innovation and socio-economic growth.

As we proudly celebrate 75 years of Independence, I believe there lies a tremendous opportunity for India to become one of the world's top three economies. This will be further boosted by India's travel and hospitality sector, which will continue to grow in the coming years, buoyed by the country's diverse offerings and a burgeoning economy.

If developed strategically, led by global standards and a focus on sustainability, the sector will play an even more pivotal role in contributing towards economy and job creation, as India continues its journey to become a nation to reckon with on the global stage.

BALANCED GROWTH PATH

► **ZARIN DARUWALA**
CLUSTER CEO, INDIA AND SOUTH ASIA MARKETS, STANDARD CHARTERED BANK, INDIA

IN 30 YEARS, at the current long-term, currency-adjusted nominal growth rate of 5 per cent, India's GDP would rise to \$15 trillion; at a reform-led 8 per cent rate, it would double to \$30 trillion. In this journey, digital and green are key as India aims to simultaneously industrialise and de-carbonise. Standard Chartered estimates India will need additional resources of \$12.4 trillion to meet its long-term net-zero goals. A catalyst for this balanced growth is the PLI (production-linked incentive) where 55 per cent of capex is expected to be green. PLI combined with landmark trade agreements (FTAs) will integrate India into global supply chains, propelling it towards the government's target of \$1 trillion exports by 2030 and manufacturing share in GDP of close to a third by 2047.

FOCUS ON CLEAN ENERGY

► **MOHIT MALHOTRA**
CEO, DABUR INDIA

THE THIRD-LARGEST ECONOMY in the globe, the factory to the world and a leading name in alternative medicines harnessing the power of Ayurveda and yoga. This, for me, summarises India@100. India would be amongst the most prosperous nations in the world with a high per capita income and probably the youngest demography. And the one area where I feel India will take the lead is clean and green energy. In line with the government's focus on safeguarding the environment and promoting a greener India, we have engaged electric vehicles in our operations, thereby reducing emissions and protecting the environment. I am confident that this move will also help us propagate the use of electric vehicles even in the hinterland, helping India achieve its green energy mission faster.
