

Skilling the Need of the Hour

► **NITHIN KAMATH**
FOUNDER & CEO,
ZERODHA

INDIA IS LUCKY ENOUGH to have the youngest population among the developing countries—meaning we have a substantial and stable population of working-age adults. But this also poses a challenge because a big chunk of this population has a massive skill gap, as can be seen in the unemployment statistics. The other important thing is we [need to] do whatever it takes to stop the brain drain and ensure start-ups register at home and contribute to our tax base. The country is also one of the very few bright spots in an otherwise gloomy global economy. If we are to realise our economic potential, we need to do whatever it takes to upskill our youth to make them ready to face what promises to be an age of disruption. We also must not forget that growth has to be equitable, while taking great care to ensure that we consider the environmental and ecological costs of growth. All said and done, I'm long on India.

A GLOBAL PRODUCTION HUB

► **H.M. BANGUR**
MANAGING DIRECTOR,
SHREE CEMENT

will continue and it is possible to sustain that at 6-7 per cent for the next 25 years, even on a larger base. That means the GDP can easily increase by 4x from where we are today. Critically, the growth rate of our population will also start to decrease. These two factors together become very important since that translates to a better quality of life and a wide choice available to the consumer. That scenario when we have a buyers' market is an indication of a developed economy. The basic foundation for all this will be laid over the next 5-10 years to make sure the world comes to India to deploy its funds and not anywhere else. I see a clear opportunity for us to become a global manufacturing hub and that will be the big transformation. Nothing can be more significant than that.

Energy Security the Key

► **PRAVEER SINHA**
MD & CEO, TATA POWER

INDIA IS CHARTING a new economic growth road map to emerge as a truly self-reliant energy secure nation by 2047. The pace at which economic development is happening will enable India to become a global economic and technology powerhouse in the next 25 years. As the world's fastest growing economy, it is adopting an aggressive carbon-reduction approach. Energy security will be a giant step for India in becoming a global superpower. The energy demand of the country is growing at a fast pace and renewables will play a major role in meeting this demand. The country has taken multiple initiatives and is accelerating the adoption of clean energy technologies to trigger a new wave of sustainable growth. Technology will play a key role in driving the entire energy transformation. My vision for India in 2047 is of a secure, efficient and clean energy nation, connected with the rest of the world through an interconnected grid in the spirit of 'Vasudhaiva Kutumbakam'.
