

The Future is Green

► **MAHUA ACHARYA**
MD & CEO, CONVERGENCE
ENERGY SERVICES (CESL)

WHEN INDIA REACHES 100, the transformation to green will have been reached. By then, all hydrocarbon-powered vehicles will be gone. Cars will be fuelled by batteries charged with renewable energy, biofuels from agricultural crops, and hydrogen from water. New jobs will be based on tech, universities will have interdisciplinary degrees, and sustainability will provide the top jobs. CESL believes that with the level of ambitious and continued steer the government is driving, India will be ahead of the world in achieving its climate commitments.

DARE TO DREAM

► **SUNIL MATHUR,**
MD AND CEO, SIEMENS LIMITED

INDIA@100 WILL SET AN EXAMPLE of being a clean and united country. An economic powerhouse where there is enough for everyone's need but not greed. Quality education and healthcare will be available to each citizen. Smart cities will attract the best talent by providing them with a sustainable environment and facilities that are integrated. India will demonstrate that bureaucracy, industry and civil society can work together to provide equal opportunity for each citizen. I dream of an India which plays a leading role in smart manufacturing, software and technology.

Macro Discipline to Power Progress

► **KAUSHIK SHAPARIA**
CHIEF EXECUTIVE OFFICER, INDIA,
DEUTSCHE BANK

I ENVISAGE INDIA@100 as a more confident India. An India where capital account convertibility should have happened along with internationalisation of the rupee, bond index inclusion, a renewable energy proponent on the fast track to net-zero emissions, home to some of the leading unicorns in the world, with agri-tech driving an integrated agricultural landscape and India becoming the world's food bowl. All this is contingent on macro indicators. The government needs to monitor debt-to-GDP, fiscal deficit, tax regulation, etc. Additionally, India's demography hinges on economic policy reforms to improve demand, remove supply constraints, and pump in huge investments in infrastructure.

Putting People First

► **UMESH REVANKAR**
VICE CHAIRMAN & MD,
SHRIRAM TRANSPORT
FINANCE COMPANY

MY VISION FOR INDIA@100 is one where everyone gets equal opportunity to do his/her economic activity. Put people first to create an entrepreneurship culture that helps communities find economic solutions and create wealth. By empowering the common man, with a focus on financial inclusion, we can democratise access to finance. Women form a disproportionately large share of India's unbanked and underserved, and that needs immediate attention. Without fully including women, we will be unable to solve the financial inclusion puzzle, end extreme poverty, and promote shared prosperity in India. Financial inclusion, however, is not only a goal but also a means to an end as an enabler, multiplier and accelerator of economic growth. My vision for India's future is not one of despair but of hope.
