

THE PIONEERS WHO HAVE MASTERED THE ART OF PRE-ENGINEERED STEEL BUILDINGS

What seemed like an alien concept few decades ago, is very much thriving in India today. It is a matter of great pride that it is an Indian Company that has emerged as the champion of the cause and a dominant player in the global arena.

Cold Steel Building Systems pioneered the concept at a time when steel was scarce and customers were not aware of the advantages of using custom built steel sections and pre-engineered structures. Since then, Cold Steel Corporation has emerged as a leader in meeting the exact needs of Indian P.E.B market by introducing world-class steel building designs and details exactly suited to local conditions and the available building materials. Comfortably entrenched in the business since 1977, the company has successfully completed more than 10,000 buildings till date. Having the widest range of PEB systems and offering comprehensive building solutions, including foundation designs, pre-engineered steel structures, roofing and side sheets/cladding, complete accessories and installation, Cold Steel Building Systems happen to be amongst the primary choices for PEB manufacturer in India. Today, Cold Steel is not only catering to the entire Indian market, but has done more than a dozen major projects abroad and are looking at sustained business opportunities in the North American markets. Cold Steel Corporation is one of the very few enterprises in the area

of infrastructure today, which is entirely self-financed and 100% Debt-Free. With an overall installed capacity of 80,000 Metric Tons Per Year and 75,000 Sq. meters of

entirely automated plants including a state-of-the-art facility for manufacturing premium quality Aluminium Foil Bubble Wrap Insulation, Cold Steel Corporation is one of the largest PEB manufacturer today. The company is committed to the mission of delivering top quality building solutions, with continuous and ongoing investment in people, products and technology and so strives to build sustainable relationships with customers, by satisfying their evolving needs.

In today's day and age when resources are scarce and the time to set up the project is limited, that makes pre-engineered steel buildings the most effective answer and viable solution. Along with being highly cost effective, constructing a multi-storey building in steel is much faster saving precious project 'Set-up' time which is a big drawback in case of buildings made through conventional methods. With depleting natural resources, steel buildings offer the best option of a completely dry and mechanized way of construction making it a green and environment friendly way of construction. Innovation, quality and affordability is the cornerstone of this unique industry vertical, which has made in-roads into the commercial building sector in India, estimated to reach a target of 20.44 billion square feet by 2030 from 7 billion square feet in 2010. It is expected that nearly 34 percent of 2030 target had already been constructed and about 66 percent of the building stock is yet to be constructed. Although at an emerging stage, the pre-engineered steel building construction will certainly see widespread application in multi-story commercial buildings and housing sector in the coming years and the growth in this area is inevitable.

With immense experience and world-class quality backing it up, Cold Steel Corporation will undoubtedly be a leader in the multi-storey steel building segment. The world of Tomorrow belongs to choices that are minimalistic, sleek design, easy to maintain while offering a unique liveable space and experience.
