SWITCHBOT S10

\$1,199

Deploy this hassle-free cleaner to clean your home; you'll love the fact that it keeps itself clean

Clean Robot

Robot vacuum cleaners can be lifesavers, given that they can keep your home clean when you are away. But what if there is a vacuum cleaner that can even clean itself after cleaning your home? SwitchBot has debuted a new robot vacuum and mop, the SwitchBot S10, which comes with an auto water refill and drain system. The S10's built-in roller mop simultaneously washes and scrubs itself at a speed of 300 times per minute when cleaning, to prevent mopping up dirty things and spreading them around your home. There's even a drying system at the bottom to dry the roller mop when it's finished cleaning.
