CHANGING DYNAMICS

Emerging economies are witnessing faster growth

ing the India Stack. This will enable successful digital solutions implemented at population scale. The fourth in-person meeting of the Digital Economy Working Group and the Digital Economy Ministerial is scheduled later in August in Bengaluru, where greater traction is expected.

TOWARDS A GREENER FUTURE

Sustainable development is another area that has seen huge strides under India's presidency. The country has been successful in delivering an action plan to accelerate progress on SDGs; the plan reiterates the commitments of member states to deliver on the goals.

Similarly, the theme of energy transition is also find-

ing many takers, given the urgent need to fight climate change. As the world's third-largest renewable energy producer and with initiatives such as production-linked incentives for electric vehicles and a National Green Hydrogen Mission, India has paved the way for meaningful discussions.

While the G20 Energy Transitions Ministerial meeting did not end with a joint communiqué, the outcome document did speak of expediting the production and use of hydrogen generated from zero- and low-emission technologies, as well as adopting biofuels. "Under the 2015 Paris accord, all the signatory nations are committed to the SDGs that primarily involve a steady transition from fossil fuels and reduction of carbon emissions to mitigate the increasing climate risks and their impact on the global economy," points out Suman Chowdhury, Chief Economist and Head-Research at Acuité Ratings & Research.

Several meetings of the Energy Transitions Working Group have taken place where the priority areas include low-cost financing for energy transition and development of diversified supply chains. "Any tangible progress in this area with enhanced access to global funds will have positive implications for India's own ambitious green financing programmes and the green goals set for 2030," says Chowdhury.

Amitabh Kant, India's Sherpa to the G20, tells *Business Today* that the goal of India's presidency is to bring the G20 nations together as problem-solvers to tackle cascading and interlinked crises for a resilient, sustainable, and inclusive world. "We will aim to drive a broader consensus on a majority of our outcomes during these meetings," he says, adding that a wider consensus has already been achieved on topics such as green development, SDGs, climate finance and tech transformation. Many of these future-forward themes are also being taken up by business leaders to discuss strategies on how to shockproof their own sectors. The B20 or Business 20 which is the official G20 dialogue forum involving the global business community has, this year, adopted the theme of RAISE, which stands for responsible, accelerated, innovative, sustainable, and equitable businesses.

It has set up seven task forces on themes including inclusive global value chains for resilient global trade and investment, future of work, skilling and mobility, digital transformation, financing for global economic recovery, financial inclusion for economic empowerment, energy, climate change and resource efficiency and lastly tech, innovation and R&D.

The B20 Summit India 2023, scheduled to be held in
