

PURE & CLEAR

Winter is coming. And so is air pollution. While little can be done about the air outdoors, you can at least filter the invisible viruses, allergens or pollutants from the air you breathe indoors

BLOW HOT, BLOW COLD

Unlike traditional-looking air purifiers that usually have a boxy design, Dyson's offerings mark them out to be lifestyle products. This one houses cylindrical filters at the bottom with an oval top that blows purified air throughout the room. Dyson claims that the advanced HEPA H13 filtration system captures gases and 99.95 per cent of particles as small as 0.1 microns. Plus, it can keep you warm in winter by throwing hot air. It is also compatible with voice assistants.

KEEPING IT SIMPLE

This air purifier features three-layer filtration with NanoProtect HEPA, activated carbon and a pre-filter. Philips claims that it captures 99.97 per cent of ultra-fine particles to keep away PM 2.5, bacteria, pollen, dust, pet dander and other pollutants. It scans the air 1,000 times a second and reports the air quality in real-time. It is designed for rooms up to 29 m² with a clean air delivery rate (CADR) of 260 m³ per hour. Get this if you want a simple, easy-to-use solution.
