

“Recognising the need of enterprises to have distinctive digital capabilities, HUL is investing in cutting-edge digital tech to shape a new paradigm of competitiveness, create innovative business models and tap new opportunities”

SANJIV MEHTA

CEO AND MD, HINDUSTAN UNILEVER

“We have partnered with Google to deploy its data-led marketing and programmatic capabilities... and reached audiences interested in our brands via high-reach platforms like YouTube, OTTs, gaming and news apps”

MOHIT MALHOTRA

CEO, DABUR INDIA

tech is being used for maintenance scheduling, down-time analysis, and assets health management to ensure smooth functioning, while the company has already been using a digital procurement system for key raw materials, services and capital goods for nearly two decades now. “This not just saves valuable time and money, but also creates the potential for micro-analysis of every step of the e-procurement journey. We also engage tech extensively in the area of traceability, besides tracking of shipping containers and transport vehicles,” says Malhotra. Further, last year it deployed a dynamic visualisation tool of its digital coverage and added new outlets with geo-tagging facilities to track and operate its field sales force with real-time actionable data.

“We have also partnered with Google to deploy its data-led marketing and programmatic capabilities to target dedicated audience cohorts on digital. We have reached audiences interested in our brand categories via high-reach platforms like YouTube, OTTs, gaming and news apps,” says Malhotra. Moreover, Dabur’s extensive collaboration with Amazon has led to sharp targeting of category shoppers via programmatic ads for its brands like Odonil and Dabur Chyawanprash. “We worked together with Lemma Technologies, which helped us run real-time contextual advertising

campaigns for brands like Nasal Drops, Shwaasamrit and Broncorid across smart screens inside doctor clinics in Delhi-NCR,” he adds.

ACCORDING TO **VRIJESH NAGATHAN**, Chief Information & Digital Technology Officer of Marico Limited, the company has adopted a healthy mix of in-house and commercial off-the-shelf digital solutions depending on the tech’s maturity, time-to-market, customisation and cost-benefit analysis. It has also planned significant investments for the modernisation of its core tech stack and migration to the cloud. “Currently, we are driving a cloud-based data-lake migration along with planning for future data streams. This will provide a boost to the AI/ML initiatives that we are undertaking,” Nagathan says. Digitisation of its logistics processes and creating an end-to-end payments process has helped it reduce vendor payment cycle time by around 75 per cent. The company has also implemented geofencing of its facilities to enable auto-reporting of shipments through an integrated system of SIM-based tracking. “In FY22, we implemented a robotic automation-based order management platform that has reduced order processing to a fraction of a second, while simultaneously managing
