

workforce. The Act was first proposed in June 2020 and approved in August 2022. Even for this leading semiconductor nation, it will take a decade or more to implement the scheme and the plans.

Similarly, India's Union Cabinet approved the 'Semicon India Program' on December 15, 2021, for the development of semiconductors and the display manufacturing ecosystem in India. However, since we in India are—for all practical purposes—starting from scratch to building an entirely new industry, we are facing a much more complex task. Today, we don't

even have enough sufficiently skilled people with knowledge of semiconductors in India. Considering the magnitude and breadth of the task facing us, I think we are beginning to make good progress on many fronts. But this undertaking is not for the faint of heart. And it will take a very long time—decades—to catch up and reach a sustainable threshold. But like I said before, we have to make a start now if we don't want to be left out.

From here on, typically, once the plans are completed, it should take two to three years to build the fab.
