

A SHOW OF RESILIENCE

SBI has survived and thrived in the past two decades

FIGURES ARE LOANS AND ADVANCES

THE LOAN MIX

Retail banking accounts for a chunk of the loans

PROFITS DECODED

SBI and its top subsidiaries in terms of net profits

FIGURES ARE NET PROFITS OF SBI GROUP COMPANIES
SOURCE STATE BANK OF INDIA

move SBI made in the past two years when there was not enough credit growth happening. The bank kept its deposits engine running by raising money and deploying the surplus in treasury operations. It is this wisdom and drive of its leaders that has stood SBI in good stead over the years, and positioned it to fund its next phase of credit growth while rival banks grapple with the challenges of mobilising low-cost deposits.

While some other banks have moved in and out of the Reserve Bank of India's prompt corrective action framework in the past two decades, SBI has never dropped off the cliff. Instead, it has kept growing its loan book and also absorbed the shocks that have come its way—like its gross non-performing assets that climbed to 10.91 per cent after the RBI's asset quality review; SBI brought it down to 3.52 per cent by September 2022. The bank is also not heavily reliant on the agri and SME segments, as they are more prone to defaults, and its corporate exposure is primarily to A+ rated companies. SBI also seamlessly absorbed its five associated banks two and a half years ago despite its already huge size.

Another area that has played out very well is digital, where its banking app YONO (you only need one) has generated a lot of buzz. Launched five years ago, YONO offers digital banking solutions and an online marketplace. It also has YONO Krishi that integrates over a dozen online *mandis* and provides agri info, and credit and investment solutions. It has also created YONO Business to cater to SMEs. There is also a plan to make YONO a neutral marketplace, so that other banks can offer their services on it.

While the app brings in the business, the bank's subsidiaries are also doing their bit. They have consistently performed well and continue to create significant value for the bank. The way its subsidiaries are scaling up, soon SBI's non-banking businesses will provide a nice cushion in case of any adverse performance on the banking front. Under Khara, SBI is also taking concrete steps to create a framework for green finance that is still evolving in India.

In all, SBI has played a crucial role in growing India's banking sector and the overall economy. And as the country's economy marches towards the \$5-trillion target, SBI will have ample opportunity to continue building its legacy. **BT**
