

Shyam Steel - Strengthening India with seven decades of quality steel

Steel is used in almost every aspect of our lives from cars to refrigerators to washing machines to roads, bridges, ships, airplanes and what not. Extensively used in engineering and construction work, the production and consumption of steel can be directly linked to the socio-economic development of a nation. The Beriwal's are doing just that, playing a small yet significant role in building a resilient India.

In the early years of independence, Late Shriram Beriwal dreamt of a self-reliant India. He knew the importance of a strong infrastructure that is needed to build a nation. Looking at category after category, he realized that it is steel that has a major role to play in every sector of infrastructure. Choosing the challenging path of steel production, he established Shyam Steel's first factory in 1953 at Howrah. His brother Shyam Beriwal joined him to take the company to greater heights. Together, the brothers laid the foundation that transformed Shyam Steel into a formidable entity. Their leadership contributed to Shyam Steel's world-class technology, quality control and complete professionalism, enabling the company to meet the stringent requirements of its reputed customers.

In 2005, Shyam Steel had built its first Integrated Steel Plant at Durgapur. Over the next few years, it had established a strong retail market in West Bengal and a pan-India institutional market. In seven decades, it has emerged as a large, growing, competitive and multi-product steel organization by delivering quality material through innovation, excellence, and dedication.

Shyam Steel is among the first companies to invest in the most upgraded and advanced international technology of Electric Arc Furnace. Their pursuit of the latest technology and intensive in-house R&D over the years has made them one of the most cost-efficient producers of steel in India. Today, the INR 45 billion group has four major steel plants, with plans for the fifth one. Their retail presence is very strong in the entire east and is gradually extending itself into the central and southern parts. They have twelve branches across India and employee strength of over five thousand.

Shyam Steel Flexi-Strong TMT rebar is used to build both

mega projects of national significance, and millions of individual homes across India. Besides TMT, Shyam Steel also has another construction steel product that was directly sold to fabricators – structural steel for domestic gates and grills. Branded as Gates&Grills, today this is the company's direct offering to the end user, the homeowner. Shyam Steel has also introduced SturdFlex – a range of construction essentials that make homes better. With two ranges, one that prevents dampness and another that aids and improves construction, the company aims to ensure that homes are safe, strong and secure from dampness and water related damages.

They have also diversified into entirely different segments. Shyam Steel already has an established power transmission & distribution line of business, infrastructure construction, and ITES divisions. They have also begun foraging into FMCG with a tea brand called BudLeaf.

Corporate CSR has been an intrinsic part of Shyam Steel since its inception. Their CSR and welfare activities are mainly concentrated in:

- Health & hygiene drives for rural women
- **Healthcare:** Health camps, distributing prosthetics, wheelchairs, ambulances, etc. | Mobile Healthcare Units (MHU) in remote villages | State-of-the-art medical testing at cost prices.
- **Education:** Rebuilding/expanding rural schools, distributing books and dresses, vocational training programs, and financial support to deserving students for higher education.
- **Disaster Relief:** Relief materials, medical aid, and volunteers
- **Green Movement:** Developing and nurturing the green belts in the Durgapur – Asansol Industrial zone, children's parks in district towns.

With investments in mining, agro commodities and food processing, Shyam Steel is going far beyond steel to strengthen the nation and its people.
