is a cinch with this
environment-friendly
fridge*

Cool & Green

Refrigerators are big hunks of plastic and metal, though they use green gases these days. Now, the Electrolux Group has developed a new line of built-in refrigerators, where the inner liners are made from 70 per cent recycled plastic, which equates to 13 per cent of the total plastic used in the refrigerator. Available in Europe to start with, Electrolux says the plastic is sourced from a speciality supplier that collects and refines it from discarded refrigerators in Europe. It also has an innovative GreenZone crisper drawer to keep fruit and vegetables fresh.

buds crafted from
recycled plastic*

A SOUND DECISION

Feel guilty every time you purchase plastic bottles of filtered water? Do your bit by using these wireless ear buds. Sony's buds come in a colour called Earth Blue, and is made from recycled materials, including factory-recovered plastic, reclaimed water bottles, and recycled plastic from automobile parts. This gives them their characteristic marbled pattern. No two pairs of LinkBuds S in Earth Blue are exactly alike, due to inevitable variations in the marbled pattern. What makes them a winner is that they are comfortable to wear for extended periods and sound great as well.
