

Featherlite Sets the Trend for Sustainable Manufacturing with 1 MW Solar Rooftop System

Leading Furniture Manufacturer Implements State-of-the-Art Solar Power Solution to Reduce Carbon Footprint and Support “Electricity for All” Initiative

Featherlite, a prominent furniture manufacturer in India, has solidified its reputation as a responsible corporate citizen by taking significant strides towards sustainability. The company has become one of the first manufacturing units in the state of Karnataka to sign a Memorandum of Understanding (MOU) with the State Government and successfully implement a cutting-edge 1 MW Solar Rooftop Photovoltaic system (SRTPV) on its industrial building. This major initiative showcases Featherlite's commitment to environmental stewardship and its dedication to supporting the government's goal of achieving “Electricity for All”, as set by the Prime Minister.

Situated in Hejjala, a mere 20 kilometers from the bustling city of Bangalore, Featherlite's state-of-the-art manufacturing unit boasts an expansive rooftop area spanning 70,000 square feet. Recognizing the untapped potential of this space, the company

has ingeniously utilized every available inch, encompassing the canteen, two-wheeler stand, car parking roof, canopies, and, of course, the main manufacturing unit itself. By capitalizing on this vast rooftop expanse, Featherlite aims to maximize power generation and significantly reduce its carbon footprint.

The solar power system comprises an impressive array of 3,000 solar panels, each capable of generating 320 watts peak (Wp) of power per day. Supporting this infrastructure are 16 string inverters, which facilitate seamless power generation and transmission to the Power Receiving Yard. Through careful planning and collaboration, Featherlite has successfully integrated this state-of-the-art system with the local power supply board, allowing any surplus energy produced to be fed back into the grid, benefiting the wider community.

With its remarkable solar rooftop installation,

Featherlite anticipates generating approximately 1.5 million units of electricity annually. This clean energy output will not only power the company's operations but also contribute 0.5 million units to the grid, illuminating the lives of numerous households. By actively participating in the electrification of homes, Featherlite exhibits its commitment to uplifting local communities and supporting the government's ambitious initiative of providing electricity access to all citizens.

Featherlite's bold and progressive move towards sustainable energy generation underscores its dedication to minimizing environmental degradation and reducing carbon emissions. By embracing renewable energy sources such as solar power, the company serves as a shining example for the manufacturing sector, highlighting the immense benefits of adopting clean energy solutions. Featherlite's proactive approach sets the stage for other industrial units in Karnataka to follow suit and contribute to a greener and more sustainable future.

This significant endeavor by Featherlite aligns closely with the national agenda of achieving “Electricity for All” by 2020. As the company pioneers the implementation of solar technology on such a large scale, it not only reduces its reliance on conventional energy sources but also actively supports the government's vision for a more energy-efficient and sustainable nation. Featherlite's commitment to minimizing its carbon footprint and promoting clean energy solutions demonstrates its corporate responsibility and the company's unwavering dedication to creating a brighter future for generations to come.

In conclusion, Featherlite's forward-thinking decision to implement a 1 MW Solar Rooftop Photovoltaic system at its Hejjala manufacturing unit has positioned it as a trailblazer in sustainable manufacturing practices. By harnessing the power of the sun, Featherlite sets an inspiring example for other companies to follow suit, highlighting the potential for renewable energy generation and the immense benefits it brings to both businesses and communities.
