Miyawaki Forest Garden, One Qube, Gurugram

At NOP, we have devised a cohesive ESG framework founded primarily on four pillars – ecosystem, human capital, community, and governance. Moreover, we have identified a combination of long-term pledges with short-term milestones to ensure we achieve our vision and create a lasting impact. With every project, we've utilized our resources to create a better space for our people. From renewable energy to waste management, our team has been innovative in making sustainable solutions.

Quaiser Parvez, CEO, Nucleus Office Parks

This approach creates value for its customers, partners, and patrons.

Empowering sustainability: Driving renewable energy integration

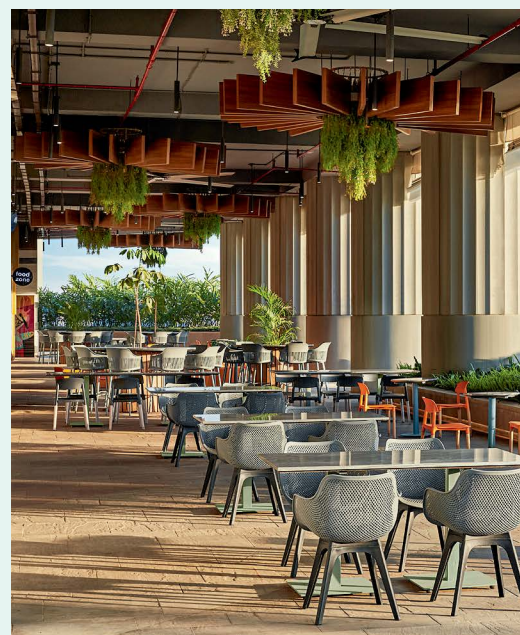

When it comes to energy efficiency, NOP's steadfast commitment is exemplified through its impressive LEED (Leadership in Energy and Environmental Design) ratings in the O&M (Operations and Maintenance) category. Notably, over 80% of the portfolio is LEED-Platinum rated, the highest level within the LEED hierarchy. This noteworthy accomplishment underscores the company's dedication to implementing rigorous measures prioritizing energy efficacy across its properties.

The efforts have made them the largest LEEDv4.1 O+M certified private portfolio in India.

- In the last fiscal year alone, NOP sourced 130 million units of energy from renewable sources, leading to an approximate emission reduction of 110 thousand tonnes of CO₂e.
- Almost 70% of NOP's entire portfolio energy is derived from renewable sources. This underscores its proactive approach to harnessing the power of clean and renewable energy to drive its operations.

Strategies are developed through a comprehensive analysis of industry trends and performance evaluations, focusing on ESG risks related to climate change, environmental management practices, working conditions, occupational health and safety, and regulatory compliance.

This seamless integration of energy efficiency measures in keeping with an ESG-driven approach creates value and fosters sustainability for all stakeholders. Tenants enjoy a tangible positive impact as they thrive on campuses powered by clean and

sustainable energy, fostering a sense of well-being and shared environmental responsibility.

Moreover, investors benefit from long-term value and stability through sustainable assets that meet the expectations of ESG-focused portfolios, aligning their investments with sustainable practices and tenant preferences.

Transformative waste management: A commitment to zero waste to landfill

India generates more than 1.5 lakh tonnes of solid waste daily to alarming consequences — sea and marine life degradation, surface and groundwater contamination, air pollution due to waste incineration, and the ever-growing menace of waste landfill.
