

extract benefits from AI,” he explains.

India’s auto ancillary makers, which have implemented technology in large doses, including Industry 4.0 digital tools, now feel AI will take their business to the next level. “As AI becomes a business opportunity, it will spread fairly quickly, not just as product disruption but as process and manufacturing disruption,” says Sunjay Kapur, Chairman of Sona Comstar and President of Automotive Component Manufacturers Association of India (ACMA). “Machine learning (ML) and AI will enable remote maintenance. It will be used to make processes more efficient, eliminate waste, and cybersecurity will play a huge role in all industries.” Agrees Rajeev Singh, Partner and Consumer Industry Leader, Deloitte, Asia Pacific. “The need for servicing will go down. We’ll move from periodic to predicted servicing,” he says.

Singh says the cost of manpower is increasing at about 10-12 per cent year-on-year, which can be managed through automation and AI: “It’s bound to happen that automation will become less expensive than manpower. There will be a significant shift in the nature of these jobs and number of people employed. And at the same time, new jobs are being created.”

Gartner’s Pacheco, too, feels automotive jobs per se are not in danger from AI. “AI is still not as advanced as it should be. Today, we’re far off from having a ‘lights out’ factory, which is completely automated and doesn’t require humans working on the shop floor or running the factory. In the short term, I would not see AI as a monster that is going to take away automotive jobs,” he says. **BT**

...GET, SET AND GO HAVE TO WAIT, AS THE CAPITAL MARKETS ARE YET TO EMBRACE TRUE AI. EVEN SO, THE THREAT TO JOBS IS REAL

BY **ASHISH RUKHAIYAR**

DO INDIA’S CAPITAL MARKETS have AI? Yes, they do. True-play AI? Ah, well, not quite.

A large part of stock market trading and execution is done using software—algorithms or algos in market parlance—with little or zero human intervention. Stock exchange data shows that well over 50 per cent of the trading volume originates from such automated trading systems. The past couple of years have seen new-age brokers like Zerodha, Smallcase, Groww, Upstoxx and Fyers, along with traditional names like ICICI Securities and Angel One, among others, focussing on artificial intelligence and machine learning (AI/ML) tools to make their platforms smarter
