casts a shadow of uncertainty over the workforce. Deloitte's State of AI in India report reveals that a significant number of businesses listed job automation as one of their primary use cases for AI. The report found that 77 per cent of respondents—200 Indian business leaders and 2,620 business leaders globally participated in the survey—expressed concerns within their organisations about the possibility of AI adoption leading to job losses. Yet, evidence alludes to a distinct perspective being adopted to address this deep-seated fear. “Do we see software developers going away? No. What we see is software developers and digital engineering teams that are assisted by AI replacing those that are not using AI. Even at this early stage, we are seeing north of 30 per cent productivity gains in some of these activities,” says Pandurang Kamat, Chief Technology Officer of Persistent Systems, a mid-tier IT company. “So, we definitely see a future where digital engineering has a strong AI-assisted component.”

This AI-assisted engineering is helping ITeS firms to both manage their own work better, and also to provide more valuable services to their customers.

Let's examine a few examples of the former first. Infosys's use of specialised AI models for

DELOITTE'S STATE OF AI IN INDIA REPORT REVEALS THAT A SIGNIFICANT NUMBER OF BUSINESSES LISTED **JOB AUTOMATION AS ONE OF THEIR PRIMARY USE CASES FOR AI**

code generation, code completion, documentation and testing has brought about a significant boost in developer productivity. Additionally, the company says the implementation of a data and AI engineering platform has facilitated faster time-to-market for its AI services, helped extreme automation across lifecycles, and enabled democratisation of AI capabilities for hundreds of data scientists within the organisation, resulting in three times faster delivery times. Then, Persistent Systems' Autonomous Insights initiative simplifies executive decision-making—it scans email communication, meeting calendars, client exchanges and more for negative sentiments and project risks, and generates email summaries with actionable insights on managing risks and making decisions in various business areas.
