

PAL-V Liberty

PAL-V.COM

\$499,000

This three-wheeled Dutch flying car can switch from driving to flying in just about five minutes. Classified as an autogyro, which means it doesn't have a propeller, the PAL-V Liberty uses a rotor—powered by the car's engine—to generate lift, and it can reach a top speed of 160 kmph on the road, and 180 kmph in the air. It can fly you up to 500 km on a single tank of fuel, and has a range of 1,300 km on land. The standard version is available for pre-booking (including in India) at a base price of \$499,000, and the company has already received over 1,000 pre-orders. If you plan to book one, do check out the numerous customisations on offer.
