

AUGMENTED REALITY

AR in cars? Yes, but we're talking about AR heads-up displays (HUD) and AR cameras. AR HUDs are a standard feature in several premium cars in India. Here, details such as potential safety hazards, driving modes, speed limits and turn-by-turn navigation are projected on the windshield in front of the driver. The BMW i7 has taken this a notch higher by superimposing turn-by-turn directions on visuals from the front camera, giving an immersive AI experience.

SUSPENSION TECH

For the tough terrain on India's roads, advanced air suspension tech can prove to be a game changer. Cars like the Mercedes-Benz S-Class and the EQS 580 have a self-levelling suspension system that automatically slows the vehicle at high speeds and can be raised to tackle tough terrain or the occasional speed-breaker. Range Rover also offers this feature across its SUVs and it can come in handy, especially for ingress and egress from the vehicle.

STEERING TECH

No matter how good a driver you are, it's often impossible to parallel park or manoeuvre a big car in narrow lanes. That's when rear axle steering—available in cars such as the Range Rover SV and Mercedes-Benz EQS—comes in handy. A slight tilt of the rear wheel reduces the turning radius and makes the big car easier to manoeuvre than a Honda City or a Maruti Suzuki Baleno.
