

Technology and Value Sensitisation, an Indian Approach in Management Education

Dr TR Pandey

Director, Ajay Kumar Garg Institute of Management, Ghaziabad

History of business is witness to the fact that the future needs to be intelligent and collaborative with data everywhere if it has to solve the problems the society is facing especially those of Economy and Climate Emergency. The incumbent generation owes a lot to the future and hence sensitivity with 100% focus on environment is the need of the hour. In fact Business Schools across the globe can contribute tremendously on this front. They need to reinvent themselves away from just being a teaching shop and employment generating unit. Climate solution is not just a science centric problem. It has got deeper insight into human value system and requires a holistic perspective to look at the problem and solutions.

Ajay Kumar Garg Institute of Management, Ghaziabad (AKGIM) has a system of regular

evaluation and continual change in everything undertaken to ensure the requisite value creation and its delivery takes place. Besides, stressing on the data driven approach to teaching, we have stood firm to what we call is balancing of value engineering and technology in the classroom.

Accordingly, as an institution we are focusing all our collective resources in areas which respond the most as per our concept of quality education and professionalism. Given the frequent economic fluctuations arising out of factors beyond the border, the demand for "agile and dynamic" MBA will only see sharp rise and AKGIM Ghaziabad is fulfilling its responsibility accordingly. Our efforts have led to drastic rise in the number of companies knocking our doors in the last few years.

Dr. Kiran Reddy

Founder Principal, AIMS Institutes, Bangalore

What are the new methods and approaches in management education and how they would help students get better opportunities?

Hybrid Program, Value added programs and certification course leading to gain confidence (among students) and encounter Management challenges as per their work profile, culture & ethics of the organization, where they will be employed.

New methods and approaches in Management Education adopted by AIMS Institutes are as follows:

Teaching Pedagogy -- Hybrid/Blended Mode of Learning,, Research oriented teaching learning, Project Based Learning,, Collaboration, Experiential Learning (which includes):Case method of teaching, Gamification, Simulations and Role play.

AIMS also follows **Best Practices** -- Outcomes Based Teaching Learning, Integrated Value-Added Program, Blended Learning, Capstone Simulation, Focus Group Discussions, Alumni Mentorship &

Interaction, Peer Learning.

Has the work load of the students increased because of the changes in the current scenario? How has been the feedback from recruiters? What do the recruiters think of the changes? What do they feel can be improved? What are the most important multidisciplinary skills for today's managers? What are the most important traits students should work on?

- Work load definitely increased... an open fact... and that is to the match and keep-up to the need of the hour. In general, it is observed that during the pandemic period students moved to their comfort zones as they were at home and not physically present in the session; being online sessions. Gradually from blended or hybrid mode to offline session have started for students of 2021-23 batch (off late) and they need to adapt & adjust with the new course curriculum, which demands more of their involvement to improve their employability skills; a challenge for them and faculty members too. Due to the Value Added Programs, Certification Programs and pre-placement training the feedback from recruiters are always positive and they appreciate our efforts for making our students industry ready.

The recruiters expressed that **AIMS** students are well aware of the changes in the industry requirements and they are ready to adapt for these changes.

Hence, AIMS has taken it as a challenge '**as times are changing in requirements**' to upskill students. It will benefit them now and in the next three to five years as well. The corporate recruiters

(essentially) predicted the top three skills that there would be an increase in demand, that is, **managing strategy and innovation, managing tools and technology, and interpersonal skills.**

The corporate recruiters have indicated the following are the skill in-demand in the next five years and leading to skill improvements in students a must, which are, Managing Strategy and Innovation, Managing Tools and Technology, Interpersonal Skills, Learning/Motivation/Leadership, Strategic/System skill, Managing decision-making processes, Interpersonal orientation, Managing Human Capital, Operations skill, Knowledge of general business function, Managing the task environment, Managing administrative activities

This justifies the changes made by Bangalore University in the course curriculum content from 2021-22 academic year onwards and expected to change again in the next two years to match with **NEP 2020.**

AIMS Value Added Programs and Certification courses being offered (with additions as need demands) to students is essentially to augment this requirement. More so, corporate recruiters expressed that in the post covid period, they are looking for managers and leaders who are well versed in soft skills to help their teams manage stress and uncertainty. As learning & skill building is a never-ending process, hence the following are the most important traits that **AIMS** students should be working on their Power skills: Active listening, Communication skills, Conflict management, Empathy, Negotiation, Problem-solving and Teamwork.
