

Note it Right

Love scribbling notes during lectures, but unable to decipher them when you need them the most? The reMarkable 2 will ensure you can scribble away to glory, yet not be found wanting when you need your notes. This speedy digital note-taking device utilises advanced technology to closely mimic the feel of a pen on paper. Its large, high-resolution display allows you to write, annotate, and organise information effectively. What's more? The handwriting recognition feature ensures that your notes are converted into editable text, facilitating easy searching and referencing of key concepts and ideas. You can also annotate PDFs.

REMARKABLE 2

\$279

You won't miss the feel of a pen on paper with this digital note-taker

Keep a Record

SONY ICD-PX240 DIGITAL VOICE RECORDER

₹4,999

This dictaphone records your lectures, freeing you up from taking notes

While one can take notes during a lecture, nothing quite beats recording it. With a dictaphone, you can focus on learning the concepts instead of taking notes. While most smartphones have voice recording apps, given the volume of recordings that you have to make during a course, and the accuracy required, it makes sense to have a dedicated device to record lectures. This device from Sony, with its dedicated 4GB storage, slips easily into your pocket and is powered by AAA batteries, so you don't have to charge one more device. Plus, you can easily transfer the recordings to your PC through the built-in USB connector.
