

» Sean Hyunil Sohn said that a disruptive and efficient tech like AI can save costs and development time for the gaming industry, along with helping develop new gameplays

» Talking about the reasons why no big gaming titles have come from India, Rajan Navani said that the industry needs commitment to better talent since India

is late to the video gaming industry, and needs more investments to build gaming titles here

» Talking about the new gaming rules announced by the government, Sai Srinivas Kiran G. said that a framework that can be discussed, debated and updated with time is required as India aims to become a net exporter of games

» Manish Gupta said that the Google AI Lab is currently developing an AI model to support over 100 Indian languages, which will be integrated into various Google products

» He added that the team is developing multilingual models

that will offer comprehensive support for multiple languages

» He said that Google is developing AI in a manner that brings benefits to the underprivileged, such as helping improve the health of expecting mothers and their babies, etc.

THE MISSING WOMEN IN TECH

(Top right) **Irina Ghose**, Chief Operating Officer, Microsoft India
Sindhu Gangadharan, Managing Director and SVP, SAP Labs India

» Irina Ghose said that a hybrid work environment gives women flexibility, with more women than men saying they would stay back if they are given hybrid options

» Sindhu Gangadharan said that tech can help remove some of the biases at the hiring stage to enable more women to join the workforce

» Citing the 14 per cent women who go on to occupy various roles from the 43 per cent women from STEM who get hired, Ghose said that the situation is far worse for women from smaller cities and towns

» Gangadharan added that to nurture women in leadership roles, women role models and allies need to be present in the organisation

THE NEW INTERNET IN A DIGITAL BHARAT

Barnik Chitran Maitra, Managing Partner, Arthur D. Little, India & South Asia

» Barnik Chitran Maitra explained that the metaverse was a convergence of virtual and augmented reality, and real-world experiences have witnessed a huge movement on the user end since Covid-19

» He added that two trends in the form of metaverse and the decentralised internet or the Web 3.0 are intersecting to create a new form of internet that has applications ranging from decentralised finance to autonomous organisations

» Maitra said that ONDC is structured very similar to where the new internet will be
