

DEAL STREET

Sun Pharma's top four acquisitions and in-licensing deals in recent times

- 1 **Sun Pharma entered into a definitive agreement to acquire the US-based Concert Pharmaceuticals in January 2023**
- 2 **It acquired the Uractiv portfolio of consumer healthcare products from Romania-based Fiterman Pharma in May 2022**
- 3 **The company signed a licence and supply agreement with Italy-based Cassiopea SpA to commercialise Winlevi—that treats acne—in the US and Canada in July 2021**
- 4 **It entered into a licence pact with Sun Pharma Advanced Research Company for commercialisation in the US of phenobarbital for injection—that treats neonatal seizures—in November 2022**

INNOVATION PIPELINE

Sun Pharma's specialty R&D pipeline has four molecules undergoing clinical trials

ILUMYA

Undergoing Phase 3 clinical trials for psoriatic arthritis; a regulatory approval would likely expand the addressable market for the drug

SCD-044

Currently unnamed, this drug is in Phase 2 clinical trials as a potential oral treatment for skin disease

MM-II

Completed a global Phase 2b study (results announced in March

2023); MM-II is a potential treatment for knee pain

GLO034

This drug has completed Phase 1 clinical trials. It is a potential treatment for type 2 diabetes and obesity

company," says Tushar Manudhane, Research Analyst at Motilal Oswal.

AROUND THE WORLD

Apart from the focus on specialty drugs, Sun Pharma also has its moves mapped out in other areas such as generics, and in all its markets including the US, India, emerging markets and ROW. In FY23, India contributed the most (31.4 per cent) to its consolidated revenues, followed by the US (31.3 per cent), emerging markets (18.2 per cent) and ROW (14 per cent). "In addition to ramping up our specialty business, we are strengthening our generics business in the US," says Gandhi. "In spite of facing pricing erosion, increased competition and consolidation of buyers, we continue to grow our generics business through a combination of new launches and market share gains for existing products."

In the Indian pharma space, the company, which holds 8.33 per cent market share, has outperformed average industry growth in the past three years, driven by its presence in chronic segments and strong brand equity with doctors. "Over the past few years, we have expanded our field force focussing on Tier II and III towns. Our wider reach is enabling us to expand our geographical footprint, accelerating access to affordable and high-quality medicines to patients in India," says Kirti Ganorkar, CEO of India Business at Sun Pharma. "Recently we launched Cequa in India. Another novel product developed in-house by our scientists is Pexitaz, a chemotherapy product that comes in a premixed, ready-to-infuse formulation. It is our constant endeavour to introduce medicines that help address unmet patient needs."

Sun Pharma is also one of the largest Indian pharma companies operating in the emerging markets, with a presence in around 80 countries including Romania, South Africa and Brazil. "With a strong distribution network and local manufacturing, we have been growing consistently in these markets on the back of new product launches and efficient supply chain management," says Aalok Shanghvi, EVP-Emerging Markets. "Many of our brands are leaders in their respective categories in these markets. Last year, we commercialised our flagship specialty product Ilumetri (tildrakizumab) in Romania, and this year we have extended it to more markets in APAC. In line with our global strategy, we plan to introduce more specialty products in our key emerging markets in the coming years," says Aalok Shanghvi, who is Dilip Shanghvi's son.

Some analysts see Sun Pharma's growth to be driv-
