

 S. George said it is necessary for colleges to maintain industry connects, as emerging technologies are expected to disrupt the way work is done

B-schools, a Bootcamp for Life

 **Aviral Bhatnagar**, Alumnus, IIMA and VC Investor, Venture Highway

 Aviral Bhatnagar said if one looks at the investing process when investing in a company, you first tell a story to yourself, then you tell a story to the investment team, and when the company is a success, you tell the story to the world

 He further said that code talks to machines, math talks to the universe and stories talk to humans. If you master all three, you're invincible... and that's why storytelling is crucial

 Bhatnagar added that one should treat their time at a B-school as education and not a placement agency, and learn the vital skills taught there as it is not an opportunity that should be missed

Remodelling the Education & Skilling Ecosystem

 N. Venkata Sastry said that a framework needs to be put in place to meet the skilling needs of individuals as companies focus on traits like risk-taking appetite, their culture, ethics etc., when they are hiring their leaders

 Vinay Padroo said that corporates need to work with educational institutions to ensure that the time it takes for students to become productive members of the workforce is reduced

 Sastry added that even though companies invest in helping their workforce adapt to emerging tech, the building blocks of such adaptability need to be inculcated at the college and university level

 Padroo said that tech might change the forms of work but the employability of humans would not be impacted as it would depend on how fast humans adapt
