

Daikin: New Factory & Skilling Campus powers the **future growth**

left to Right Mr. N Nishioka, Mr. S Suzuki, Ambassador of Japan to India Mr K J Jawa, CMD Daikin India Mr. S Bhattacharya, Mr. R Sannareddy, MD Sri City

Daikin India laid the foundation stone at the site of its upcoming 3rd manufacturing facility at Sri City, Andhra Pradesh. This new factory would be ready for commercial production by the year 2023 and help Daikin India become the largest manufacturer of Air-conditioning equipment in India.

This upcoming factory will serve the domestic & international demands with its cutting edge India-manufactured air-conditioning equipment. In line with Daikin's aspiration to achieve Net Zero CO2 emissions by 2050, the company will work on developing climate friendly Acs for markets such as West Africa, Sri Lanka, Bhutan, Nepal, Bangladesh, Middle East, South America and East Africa.

Commenting on the occasion, K J Jawa, Chairman & Managing Director, Daikin India said, "This investment is an essential part of the long-term growth strategy & aiming to expand and balance our global manufacturing footprint to best serve customers worldwide. One important pillar of our long-term strategy is to operate with an agile and flexible set-up that enables us to react quickly to the market requirements, establish further production capacities in the growth region of India with high-tech production capabilities – and all this makes Sri City factory strategically very important for us. It going to be a manufacturing marvel having all Industry 4.0 digitization standards."

With India's status of a reliable manufacturing destination with favourable policies and ease of doing business affirmed by the Govt. of India's PLI Scheme,

Daikin India is perfectly poised to take advantage of the demand explosion predicted over the next 5-10 years. Consumers are looking for energy-efficient and IA enabled products having low cost of ownership. At Daikin, we are witnessing a rapid adoption of ACs across the globe, thereby justifying this bold investment in India.

At the same time, Daikin India inaugurated – Daikin Japanese Institute of Manufacturing Excellence (DJIME) at Neemrana, Rajasthan as part of its Corporate Social Responsibility vision. DJIME aims to offer a training program for "students" that consists of a combined curriculum with on-the-job training, HVAC technical knowhow, soft-skills training & Japanese manufacturing

processes training, through their tenure. All trainees will receive the DJIME certification upon completion of this program. It is our aim to certify 1, 50,000 Indian youth by 2025 on Japanese manufacturing methodology & principles that can help the HVAC industry win over the skill shortage.

The Daikin India-JIM marks the start of collaboration between the Governments of Japan and India to create a pool of skilled manpower for manufacturing in India. This follows from a Memorandum of Cooperation (MoC) signed in Tokyo on November 11th 2016 between Ministry of Economy, Trade and Industry, Government of Japan (METI) and Ministry of Skill Development and Entrepreneurship, Government of India (MSDE).

Commenting on the DJIME inauguration, Mr. K J Jawa, Chairman & MD, Daikin India said, "This skilling campus is aimed at upgrading the training across Air Conditioning to international standards. We at Daikin are committed towards excellence in technology and quality; and this initiative will provide a platform to these students to enhance their skills and get access to world class training in Air-conditioning space. Having identified skill development as a challenge in India, Daikin is at the fore-front with government & educational institutions to boost 'societal development through skilling' and encourage 'women inclusion in workforce' through DJIME."

DJIME, located at Neemrana, Rajasthan, is spread over 5-acres and can accommodate 250 students per session, while operating at full strength. Daikin is committed to support Government's "Make in India" and "Skill India" initiatives and this DJIME- campus is a positive step in that direction, to build a better and stronger India.
