

ANCHORING INDIA'S LEAP FROM THE GROUND UP

With a revolutionary thought process and a successful patent in his massive portfolio, Engineer & Construction Innovator Vikas Patil has changed the way we look at huge infrastructure projects.

The forty feet high courtyard atrium in 'Bijai' - the Patil home at Pune, has a vertical blind system specially designed for it; it is simply one of the things that marks Engineer and Inventor Vikas Patil as an innovator of no small dimensions and no easy dreams. From his journey as a committed teacher to the genial but driven team leader and MD of Savi Infrastructures & Properties Pvt. Ltd., the path has been a roller coaster of achievements, completely out-of-the-box thinking, hard core planning and the vision that comes only to those who dare to take the leap of faith, when the 21-year old civil engineering

graduate decided to teach at Pune's prestigious College of Engineering - COEP, there were no plans to invent or hit the skies with all guns blazing; there were more mundane matters on hand on the home front and the teaching job offered the chance to interact with intellectuals, question facts and figures and get into the channel of improvisation and research. Being a research scholar at IIT Bombay helped to sharpen this keen sense of wanting to devise new methods, experiment with new technology and explore possibilities by using the facilities possible in the environment of an institute.

The first decade of the new millennium proved to be a crucial timeline. A technology devised by Vikas was used on a site of national importance and its efficacy was proved fitfully. The method was streamlined and the patent was registered, sealing the uniqueness of his INNOVATION. Today, he holds a patent for the Graviloft Technology - which is not only an innovative method of designing and constructing earth retaining structure, but its application will be a game changer for the way we view and construct huge scale roads, highways and bridges across the length and breadth of the country. Life is never easy for any
