

Patek Philippe 5326G-001

Patek Philippe's collectors love the brand for its complications—the kind of watches that do more than just tell the time. The latest Reference 5326G will not disappoint as it is responsible for eight new patents. The watch monitors two time zones simultaneously—your home time and the local time. Surprisingly for a brand that has done some amazing things in its 180-year history, this is the first watch that unites annual calendar and travel time complications, making it a collector's dream.

Panerai Submersible QuarantaQuattro Carbotech

Panerai, known for its diver watches made in the 1930s for the Italian navy, continues to explore the deep. Its new midsize line, the Submersible QuarantaQuattro, at 44mm, comes in its patented CarboTech material which is a composite based on carbon fibre, making it extremely light. It is water-resistant up to 300 metres and its rotating bezel helps measure submersion time. The P.900 caliber features a seconds sub-dial at 9 o'clock and supplies a three-day power reserve. The watch will be available in Panerai boutiques in India in May.

Vacheron Constantin Historiques 222

In 1977, Vacheron Constantin, the world's oldest watchmaker in continuous production was 222 years old and to mark that milestone, it launched a bracelet watch in 18k gold with a sophisticated mechanism. The '222'—as it was called—has been reimaged 45 years later. The 37mm 18k yellow gold dress watch now comes with some key modernising touches including an updated movement for greater accuracy. The watch will soon be available at Vacheron Constantin boutiques globally.
