

Bvlgari Octo Finissimo Ultra

The world's thinnest-ever wristwatch—the 110-faceted Bvlgari Octo Finissimo Ultra—is just 1.8mm thick and has eight patents. In keeping with the times, it has a laser-etched QR code on the winding barrel—your ticket to the watch's unique NFT video artwork. There are only 10 such watches being made.

Omega Speedmaster Moonshine Gold

Omega's Speedmaster is best known as the NASA-approved watch that accompanied Neil Armstrong's maiden voyage to the moon. Over the years, the brand has introduced several versions of it. But with its latest launch of two new Speedmasters in the brand's proprietary metal called Moonshine Gold—a mix of gold, silver, copper, and palladium—Omega has one-upped itself. Omega is offering a luxury version of what is at its core a sports watch. The watch will be available at Omega boutiques in India by November.
