handcrafted washbasins with artwork by Jai Prakash, a Padma Shri artist specialising in miniature paintings. Priced at ₹5 lakh a piece, there are only 100 such individually numbered washbasins.

“Mirror, mirror, on the wall... who is the foggiest of them all,” is something most of us identify with as we step out of a hot shower only to find the vanity mirror fogged up. Wiping it clean is almost a ritual. Now if only you could clean it with the wave of a hand. While the Roca Prisma Comfort model doesn’t do that, it comes close. For a little over ₹1 lakh, you can switch the LED lighting above and below with a single wave of your hand. The mirror is fitted with a series of demister pads behind the glass that quickly remove any condensation. So, basically your

mirror never fogs up.

Sustainability is also becoming important for consumers. “Designers today are more aware of and encouraging sustainable solutions by way of technology. Whether it’s the use of energy-efficient lighting or cooling systems or water-saving taps or flushing systems for residential and commercial spaces, home automation has become big too,” says Bagzai of Livspace.

GROHE, for instance, has faucets where the temperature is displayed so you don’t waste water, waiting for it to be just the right temperature. The faucets come with infrared sensors to switch from standard water flow to water-saving mode. Denmark-based Flow Loop has launched a showering system that recycles the water. Priced at

€3,000, the shower can be installed in existing shower spaces. “You decide if you want to recycle the water by stepping on our patented drain cover. By stepping on it again, it switches off,” says Troels Grene, Founder, Flow Loop. Grene hopes to bring the shower to India soon.

With a focus on wellness, bathrooms are also turning into mini spas. From jacuzzis in your bathtub to steam and sauna in your shower cubicle, there is no end to the level of comfort and luxury that you can enjoy in your very own haven. Little wonder, Archimedes had his ‘Eureka!’ moment in the bath. Who knows, you may just come up with the next big idea sitting on the intelligent toilet. **BT**
