

ACVISS SHIELD: YOUR BRAND PROTECTOR

Duplicates and Counterfeits are the bane of every successful brand and product across the globe. While customers get cheated with substandard products the impact on the individual brands is more pronounced. They suffer from an erosion in customer confidence that then snowballs into sales and marketshare drop. Acviss has developed a foolproof system to protect, monitor and eradicate counterfeits from the market place, allowing brands to focus on doing what they do best.

Counterfeiting is a major challenge for companies and brands, worldwide. Every successful brand, irrespective of the industry is a victim of fake substandard products that flood the marketplace. While counterfeiting happens with physical products, the communication often goes online with the major digital mediums being used for propagation. The reach of the internet has ensured that across the globe, fake goods are being successfully sold across various industry domains. Some products are sold with fake organic claims or GI tags.

This affects the profit and sales of brands while seriously compromising the lives of consumers. As per OECD (Organisation for Economic Co-operation and Development) reports, global trade in fake goods is now a humungous half a trillion dollars.

This is where the Acviss expertise steps in. Beginning operations in 2016, Acviss has perfected the business of protecting supply chains from counterfeiting and fraud. In this short span, its domain expertise has been sought and utilized by over 80+ reputed clients across the pharma, agriculture (seeds and pesticides), food, FMCG, plywood, automobile and electronics industries. Acviss's technology has been successfully incorporated and harnessed by industries affecting more than 1.15 Billion Products.

Acviss is committed to controlling fraud in the supply chain, to ensure consumers get the original products. The brands are aggressively protected from fake copies that erode the top line, bottom line and brand loyalty. Acviss provides a unique non-cloneable identity for all products, equipping them with non-tamper security labels. A direct design on the physical packaging is also possible, which acts as the DNA or unique signature for the product. Acviss has also perfected the technology to identify the signature and assess if it is genuine. The product signature developed by Acviss incorporates a lot of hidden elements that are not visible to the naked eye, making it virtually impossible to replicate.

With Acviss, consumers can now be always sure of buying genuine products. Acviss offers real-time traceability for a lot of products. Customers can even see how the product moves through the supply chain. These efforts boost customers' confidence in the products while creating an exclusive and interesting brand story, while adding to the brand authenticity.

In today's digital age, fraud is also propagated through fake websites with a name and design similar to prominent shopping portals or through unauthorised sellers on well-known marketplaces. Acviss protects companies from online fraud by scanning the internet and identifying aberrations in product pricing, unauthorised websites, and domains that have cropped up with similar names or fake links on social media.

Acviss is also engaged in the protection of government authority documents.

Over the years, Acviss has constantly evolved, upgrading and reinventing the technology to ensure that it is relevant and foolproof. In the process they have helped clients recover crores of losses with their solutions. Acviss

employs the latest mobile, machine learning, computer vision, blockchain and cryptography systems to ensure their technology is highly advanced. Their services and suite of products ensure that Acviss is sought after by companies globally, with clients spread across India, Europe and America.

If your brand needs a friend to watch over, look no further. Your customers and you, deserve a brand protector like Acviss.
