

BEAUTIFUL WORKHORSE

While many traders use Windows PCs to access the stock markets, most serious traders prefer an Apple iMac, with its high-resolution 24-inch Retina display offering visuals in 4.5K—that makes analysing stock charts and data a breeze. The iMac 2023 also offers an efficient multitasking environment that allows you to juggle between multiple tabs and websites and keeps updating the numbers without a hitch, thanks to its new and powerful M3 processor—that integrates the processor, graphics and memory into one unit—coupled with the intuitive macOS. They both combine together to deliver a reliable and stable user experience, perfect for keeping track of the market and your investment portfolio. All this is packed in a stylish and sleek 11-mm thick body that comes in bright colours such as blue, green, orange, and yellow, among others, coupled with a Magic Keyboard and a Magic Mouse, to offer cool and quiet operations, even during intense trading sessions.

TRADING UP

With retail trading becoming increasingly common, here are a few top-notch devices that can help you invest smartly

BY NIDHI SINGAL

Power Packed

If you want desktop-like power in a slim, portable package, the HP ZBook Power G10 Mobile Workstation has got your back. Designed to handle complex, multi-threaded apps and run professional software, this laptop—that can be powered by up to a 13th Gen Intel Core i9 processor or an AMD Ryzen 9 7940 HS PRO processor—offers enhanced features suitable for stock-market tracking and trading applications. It also offers 2K visuals on a 15.6-inch display, along with HP Wolf Security for Business to provide endpoint security, making it the perfect companion for your on-the-go trades.
