

PRECISION AT ITS FINEST : RUBY HALL CLINIC LEADS THE WAY WITH THE CYBERKNIFE SYSTEM

Dr. Bhooshan Zade,
Chief Consultant & Director Of
Radiation Oncology & Cyberknife Radiosurgery

Q: Dr. Zade, could you explain how the CyberKnife is advancing the field of radiosurgery and radiation oncology at Ruby Hall Clinic?

A: The CyberKnife S7 has been a game-changer for us at Kamalnayan Bajaj Cancer Centre. This cutting-edge technology allows us to deliver highly precise and targeted radiation therapy with unmatched accuracy. The key strength of the CyberKnife S7 lies in its unparalleled accuracy and versatility. The system employs a unique robotic arm and a real-time tracking system that constantly adjusts the treatment beam's position to match the patient's breathing and any minor movements during the procedure.

This dynamic tracking capability allows us to deliver highly focused radiation to tumours in almost any part of the body, sparing the surrounding healthy tissue. This accuracy is critical, especially in cases where tumours are located near critical structures or in challenging anatomical positions.

In practice, this means that we can effectively treat tumours that were once considered inoperable or too risky to address with traditional surgery or radiation therapy. The CyberKnife S7 has been a game-changer for patients with conditions affecting the brain, lung, spine, liver or prostate.

Q: Dr. Zade, what are the key advancements in the CyberKnife S7 that set it apart from other cancer-fighting technology available in Pune?

A: The CyberKnife S7 stands out among cancer-fighting technologies in Pune due to several key advancements. First and foremost is its unmatched precision, enabled by a robotic arm that delivers sub-millimetre-accurate radiation doses. This

precision is essential, especially for complex tumours and those near critical structures, as it minimises damage to healthy tissues. Real-time adaptive planning and tracking are another defining feature ensuring precise targeting while sparing surrounding tissues.

Q: How does the CyberKnife integrate into the broader landscape of cancer treatment at Ruby Hall Clinic, and how does it complement other therapies, Dr. Zade?

A: The CyberKnife S7 is an integral part of our comprehensive cancer treatment approach. It's particularly effective in cases where surgery isn't an option. It is often used in cases where surgery is not a viable option due to the location, patient health, or other factors. This technology works seamlessly with other treatments, such as chemotherapy, surgery, and traditional radiation therapy. It excels in treating tumours that are challenging to access or too close to critical structures, making it an indispensable tool in our arsenal.

Q: Dr. Zade, what sets the CyberKnife S7 apart in terms of patient experience and comfort when compared to traditional cancer treatment methods?

A: The CyberKnife S7 offers a distinct advantage in terms of patient experience and comfort compared to traditional cancer treatment methods. Its non-invasive, frameless design eliminates the need for uncomfortable immobilisation devices, which is often required in conventional radiation therapy. This means that patients can undergo treatment in a more comfortable and relaxed manner. Additionally, the precise targeting and adaptive planning of the CyberKnife reduce the duration of treatment sessions, leading to shorter treatment courses. This not only enhances patient comfort but also minimises the disruption to their daily lives, making the overall treatment experience more patient-friendly.

Q: Dr. Grant, can you provide an overview of Ruby Hall Clinic's Kamalnayan Bajaj Cancer Centre, its services, facilities, and its pioneering role in the field of cancer care in India?

A: The Kamalnayan Bajaj Cancer Centre at Ruby Hall Clinic, established in 2006, is a cornerstone of cancer care in India. Our mission is to provide comprehensive cancer care under one roof, and this vision is

Dr. P. K. Grant,
Chairman & Managing Trustee,
Ruby Hall Clinic

realised through collaboration among some of the country's most exceptional doctors. Our focus is on advancing cancer prevention, early detection, and treatment, and we've gained recognition both nationally and internationally for our pioneering work in these areas.

Our centre is known for hosting a wide array of services, ranging from surgical oncology, radiation oncology, medical oncology, nutrition services, a specialty pharmacy, social workers, and psychological services. We house one of the most innovative Bone Marrow Transplant programmes in Asia. We take pride in our technological brilliance, with the latest equipment including the CyberKnife S7, the DaVinci Robot, Spect CT, the True Beam STXLinear Accelerator, the Halcyon and Gamma Scanners among others.

Moreover, our active support system, rehabilitation programmes, and day-care units aim to make cancer care as comfortable and convenient as possible. We actively engage in research to enhance cancer diagnosis, treatment, and recurrence prevention, further contributing to the field. Our commitment to compassionate care, through the IPF scheme, ensures that everyone who seeks our care can access it. By spreading awareness through educational activities, we aim to make a positive impact on the healthcare landscape in India and continue to be a leading institution in the field of oncology.

Q: Mr. Khodaiji, the medical industry is undergoing constant transformation. Where are you positioned in this industry and how do you plan to leverage the vast business opportunity?

A: As per the World Health Organisation (WHO), cancer is responsible for almost
