171.76 million

users, with 5.62 billion documents issued under different categories as of June 2023

SOURCE BT RESEARCH

is stopping it from signing more MoUs—the limited talent pool and developer ecosystem to support the extension of this architecture. Though India is quickly building on its talent base, it will also release courses to certify developers and system integrators to use and deploy India DPI, adds Kaushik.

Given the enormous interest in India's DPI, the government also intends to build and maintain a Global Digital Public Infrastructure Repository (GDPIR), a virtual repository of DPI, for the use of other G20 members and beyond. "This will include India's DPI and those adopted and tweaked by other nations. This will be a ready repository for more nations to adopt DPI," adds Union Minister Chandrasekhar.

"Multiple use cases have been built and implemented in India, which means countries adopting [DPI] don't have to start from scratch"

THE ROAD AHEAD

During the G20 Leaders' Summit in New Delhi in September, the declaration called for a secure, trusted, accountable and inclusive DPI. It suggested a framework for the development, deployment and governance of DPI. It also asserted that safe, secure, trusted, accountable and inclusive DPI, respectful of human rights, personal data, privacy and intellectual property rights can foster resilience, and enable innovation.

During its presidency, India also proposed the One Future Alliance (OFA) for building capacity and providing technical assistance and funding support for implanting DPI in LMICs. "The OFA has the potential to support developing countries in their adoption of DPI by offering
