

The tragic loss of lives in Libya is a stark reminder of the impact of climate change. Considering the increased frequency and intensity of climate-related disasters globally, reducing disaster risk and building resilient infrastructure are increasingly becoming crucial. India has catalysed efforts to reduce disaster risk through the institutionalisation of the Disaster Risk Reduction Working Group during its presidency.

The NDLD calls on all the parties to set an ambitious, transparent and trackable New Collective Quantified Goal (NCQG) of climate finance in 2024 from a floor of \$100 billion, and calls for developed countries to at least double their collective provision of adaptation finance from the 2019 levels by 2025. Apart from getting assurances from developed nations that commitments on climate finance will be met and ambitions enhanced, we have also ensured that the discourse on the scale of development and climate finance shifts from billions of dollars to trillions. Key to this will be bigger, better and more effective Multilateral Development Banks. We have recognised that we require an

international development finance system that is fit for purpose, including for the scale of need and depth of the shocks facing developing countries.

Informed by our experience of driving socio-economic transformation, India's model of development is going global. We have all seen the impact digital public infrastructure (DPI) has had in India. Be it digital payments, Co-WIN, DigiLocker, or DBT, technology has reached the last mile, transforming lives. Showcasing this experience has been crucial in building a consensus on a G20 Framework for Systems of DPI, allowing countries across the world to adapt, build and scale DPI. Through the One Future Alliance, low- and middle-income countries will be assisted through capacity building and financial support to build DPIs.

Crucial to the success of the NDLD was reaching a consensus on the geopolitical situation. While recalling the language of the Bali declaration, the text of NDLD goes beyond it to make it stronger. First, we have underscored that all states must act in a manner consistent with the Purposes and Principles of the UN Charter in its entirety, and that all states must refrain from the threat or use of force to seek territorial acquisition against the territorial integrity and sovereignty or political independence of any state. Second, we have also highlighted the human suffering and negative impacts of the war in Ukraine with regard to global food and energy security, supply chains, macro-financial stability, inflation and growth. Third, we have ensured the immediate and unimpeded deliveries of grain, foodstuff, and inputs from Russia and Ukraine, necessary in ensuring food security, especially in the developing world. In the spirit of *Vasudhaiva Kutumbakam*, we have also delivered a message of peace.

With the inclusion of the African Union as a full member of the G20, we have added the voices of 55 additional countries to G20, making it more inclusive and representative. Our presidency is the most ambitious on women-led development as well. Additionally, a new working group on women's empowerment has been finalised during our presidency.

During this year, India has reaffirmed the G20 as the premier forum for global economic co-operation, and reinforced trust in the multilateral system. The NDLD reflects PM Modi's clarity of vision that India's G20 presidency must usher in a new era of human-centric globalisation. His guidance, vision, and global standing have been crucial in driving our presidency towards consensus. It has been my honour to be his Sherpa to the G20 during India's presidency. **BT**
