THE NEW PATH

At the crest of this wave of change is Vikram Pawah, President and CEO of BMW Group India, who recognises that the definition of luxury is undergoing a profound shift. “India’s consumers are forging a new path in luxury,” Pawah asserts, in a tone that has more than a hint of the excitement of a pioneer entering uncharted territory. “It’s not just about owning a car anymore; it’s about a statement, about practicality, about a blend of luxury and utility.”

According to Pawah, it’s not merely about traditional symbols of wealth anymore; it’s about a fusion of technology, performance, and elegance. “Our approach is all about minimalistic elegance. In our latest BMW 7 series, traditional buttons have made way for touch, voice, and gesture commands. We call it shy tech. Features appear only when you need them,” he explains.

Additionally, customisation and personalisation play a pivotal role. Manufacturers offer an array of options—like lighting enhancements, personalised upholstery, climate control features—allowing

customers to tailor their vehicles according to their preferences. This bespoke approach ensures that each car becomes a reflection of its owner’s individual style and taste, says Lamborghini’s Sharad Agarwal. The company’s Ad Personam programme allows customers to create their own personalised Lamborghini, tailored to their specifications. “Our clients aren’t just buying a car; they’re investing in a piece of art that mirrors their soul. Customers willingly invest a substantial portion of the car’s value in personalisation, underscoring the growing importance of customisation in the luxury market,” says Agarwal, the Head of Lamborghini India.

Addressing the changing perception of
