

SACO LED LIGHTING

► **Planning to** call friends over for movie or game night? Give your personal cinema the feel of a lounge with customised architectural video lighting from SACO. The company, which has made its name with its exquisite outdoor projects such as the MSG Sphere at the The Venetian Hotel in Las Vegas (*below, in picture*) most recently and Montreal's supper club Ristorante Buonanotte—where the restaurant transforms into a disco after dinner service—could very well be the X factor that will make your home theatre the hangout place of choice for your peer group. Not to mention the bespoke experiences the media display panels can present. Price: Based on project.

CAT MBX POWERED SPEAKERS

► **Your personalised home** theatre deserves bespoke speakers as well. Just hop over to the offices of California Audio Technology (CAT) to order yourself a custom-built speaker system. Each speaker tips the scales at 5 tonnes and is equipped with 55 cm subwoofers, 23 cm woofers, 3 cm tweeters, and 14 cm mid-range speakers, housed within an enclosure exceeding 20 cm in thickness, crafted using CAT's closely-guarded lamination process. These speakers look at home even in the most aesthetically designed spaces, while delivering sonic nirvana, whether you're watching a movie, listening to music or gaming. While prices start at \$500,000, an MBX system with all the bells and whistles could set you back by \$16 million.

HART AUDIO D&W AURAL PLEASURE

► **If you'd like** your home theatre to be the epitome of opulence, how about getting yourself a pair of speakers—which could very well function as your front left and right speakers—that are worth their weight in gold? Literally, each speaker cabinet is crafted from 50 kg of 24-carat gold, and its unique shape is inspired by the age-old art of bell-founding—they'll be a conversation piece even before you press play. The heart of these speakers lies in their three driver units, which collaborate harmoniously to yield a meticulously controlled and perfectly balanced audio signal that results in an auditory experience that is difficult to match. Price: \$5 million.
