

APPLE'S NEW ENGINES

At WWDC, Apple refreshed operating systems for its devices, and unveiled two laptops powered by the M2 chip

BY NIDHI SINGAL

EVERY YEAR, Apple users wait with bated breath for the Worldwide Developers Conference (WWDC) to find out about new features they can look forward to in their devices. This year, Apple unveiled many updates that will bring new capabilities later this year. A look at the key features across iOS 16, iPadOS 16, watchOS 9 and macOS Ventura that we think will enhance your experience.

HEALTH WATCH

Focussing on health, watchOS 9 features an updated Workout app, which will provide richer metrics for measuring performance, and new training experiences to reach fitness goals. The in-session display uses the Digital Crown to rotate between easy-to-read Workout Views. With watchOS 9, Apple Watch will be able to display sleep stages between REM, Core, or Deep sleep. Having prevented cardiac incidents with early warnings via AFib, the new OS brings in the AFib History feature to provide deeper insights into a user's condition.

OTHER FEATURES:

New medication app

Customisable watch faces

FRESH SAUCE FOR iPADS

iPadOS 16 goes big on multitasking. Stage Manager automatically organises apps and windows, making it easy to switch between tasks. You can also create overlapping windows of different sizes in a single view or open apps from the Dock to create groups of apps. The revamped Dictation feature helps quickly move between voice, touch, and Scribble with Apple Pencil. Then there's Freeform, a shared whiteboard.

OTHER FEATURES:

Desktop-class apps

Full external display support

Handoff in FaceTime
