

NEW CHIP ON THE BLOCK

WWDC isn't just about software. This year, Apple also unveiled two new laptops powered by the latest M2 chip—the MacBook Air and the MacBook Pro. The former features a 13.6-inch Liquid Retina display with a 1080p HD camera and MagSafe charging; the latter features a 13-inch screen with an 8-core CPU and 10-core GPU. This MacBook Pro supports up to 24 GB of unified memory, making multitasking and working with large assets fluid.

Available on: apple.com/in

MACBOOK AIR WITH M2:
₹1,19,900 onwards

MACBOOK PRO WITH M2:
₹1,29,900 onwards

OTHER FEATURES:

- Safari tab groups
- Overhauled Mail app
- Updated Spotlight

RENEW YOUR iPhone

With iOS 16, iPhones get a redesigned lock screen that allows customisations, including widgets on the lock screen. Notifications roll up from the bottom of the screen for a clear view of the lock screen. Another addition is the ability to edit a sent message. Plus, there's an option to recover recently deleted messages and mark conversations as unread to come back to them later. With Focused Filters, content relevant to the profile will be displayed.

Ace it with Ventura

Apple is making browsing more secure on Safari with 'passkeys'—the next-generation credentials stay on the device, and not on the web browser. Like iPadOS 16, macOS Ventura gets Stage Manager to help the user stay focussed on the task in front, while easily switching between apps and windows. And with the new continuity camera feature, Mac users can use their iPhone as a webcam, which brings features like Center Stage, Portrait mode and Studio Light to Mac devices.

OTHER FEATURES:

- Enhancement of Live Text
- Visual Look Up
- New tools for Mail
